WESLEY VANWART, Barrister. Office: Queen Street, OPPOSITE NORMAL SCHOOL. Fredericton, May 6th, 1893.

A REMEDY THAT TOOK HOLD. A preacher's righteous soul was sadly vexed by the talking and gilding of some of the junior members of his congregation. Breaking off in the middle of his discourse, he looked straight at his tormentors, and said: "Some years ago there happened to sit right in front of the pulpit a young man who was perpetually laughing and talking and making silly faces. I stopped short and took him severely to task. At the close of the service a gentleman stepped up to me and said: 'Sir, you made a great mistake; that young man is an idiot.' 'Since that time I have not ventured to reprimand any persons who behave themselves indecorously, lest I should repeat the same mistake and inflict censure upon an idiot.' There was exemplary silence during the rest of the service.

GEO. A. HUGHES, Attorney and Solicitor, NOTARY, CONVEYANCER, &c. OFFICE: WHELFIELD BUILDING, 100, QUEEN ST. FREDERICTON, N. B.

W. E. SEERY, Merchant Tailor. Has Just Received a splendid new stock of CLOTHS AND TWEEDS, COMPRISING Winter Overcoating, Suitings, and Trouserings.

and give the cows some of it twice a day. Here he gave some good illustrations showing differences between well fed and poorly fed cows. He would not in the present state of market advise growing beef. It costs five and five and a quarter cents per pound to produce, and the profit made from what is realized above that cost is small. Milk, however, is the best food we have, and can be converted into butter and cheese and the cow can thus be made to pay her way every day in the year. A good cow ought to be worth \$50 or \$60 a year and the cost of keeping not more than \$20 or \$25 if fed on the ensilage, straw and mashed oats, cows should give milk ten months in the year and thus pay their way in winter. There are plenty of cows in every community that will do this. Tests were made at the experimental farm and hay and oats were found to be perhaps the best food but were too expensive, and good results could be obtained from food costing only one third as much. After the cow comes the pig, which pays well for its feed. Sheep from present prices of wool, lambs and mutton would not now pay; like the beef business they had declined. He was pleased to be called along, to see our new cheese factory, said it would be the making of this community if properly supported by the farmers, and managed on business methods. Explained at some length the advantage of the factory saving of labor, of time, of expense, and of producing a uniform article commanding a better price in the market, etc. Said that in five years the farmer who employed the new method and adopted the better system would double his income. Admitted to us to be honest with cows, give her good food and attention and with the milk, not to be afraid that it was too thick or too rich, etc. Explained the chemical changes that took place from the time the milk was drawn from the cow till it was butter, and why the cow should have a variety of food, and give the women a lot of valuable information as to management of the milk, cream and butter. Then the meeting was open for questions, and for half an hour the professor was kept busy answering questions as to the construction of silos, growing and storing ensilage, feeding different farm animals, etc. At the conclusion of Mr. Robertson's remarks, were made by the president of the cheese manufacturing company, J. N. Grant, and by the chairman, after which a vote of thanks to Prof. Robertson, and to the chairman presiding the meeting to a close. Our people especially those interested in the cheese factory, were greatly pleased with the straightforward and convincing manner of the Professor's address and we have a number of practical farmers in this locality who are going to benefit by the information received. On the 22nd Nov. Mr. Robertson held another meeting in the adjoining district of Campbell Settlement, which, though not so largely attended on account of a heavy storm, was an entire success. TO CURE BACON AND HAMS. The Country Gentleman gives several receipts for the cure of hams and bacon, and have proven good by those who have long made use of them. As there is more or less variation in the proportion of the ingredients, and the taste of the cure must decide which is best for him: No. 1. One ounce of salt to every pound of meat; one ounce of saltpetre to twenty pounds of meat; five pounds of sugar to 100 pounds of meat; water to cover. No. 2. For 100 pounds of meat, nine pounds of salt, three ounces of saltpetre, three pounds of molasses sugar, one ounce of bicarbonate soda, six gallons of water. Leave in pickle six weeks, and smoke to taste, using fragrant woods. No. 3. For 100 pounds of meat, nine pounds of salt, three ounces of saltpetre, three pounds brown sugar. No. 4. Dry-cure—Mix one pint of fine salt with one pint of coffee sugar and rub every part of hams for three days. As moisture oozes from meat, lay in pans, and dip it over meat as you rub on the salt mixture. In three or four weeks smoke, rub a little black pepper on surface, put in cloth bags and whitewash. No. 5. Hamper bacon—In a shallow wide tub, put brine strong enough to float an egg. To each peck of salt add two ounces of refined saltpetre, and one to two pounds of brown sugar or good molasses. After being six weeks in the pickle take out meat and smoke it; or, when dry, rub with wheat flour, wrap in newspaper, and put in dry place. THE ARK DEPARTS ALL. Speaking of ancient ships and shipbuilding, Prof. J. Harvey Biles said that, though Great Britain and America had made such great strides in shipbuilding, none of their wooden ships approached the largest of the Ark. It was 450 feet long, 75 feet broad, and 45 feet deep. He calculated that this was the size of this vessel from the Bible measurements, taking the cubit to be 18 inches. This, he thought, was the correct measurement. The largest wooden ship afloat now did not nearly approach the size of the Ark; the vessel was the Shenandoah, and her dimensions were 299 feet by 49 feet broad and 29 feet deep. Even the Campania was much smaller than the Ark, except in length, and the dimensions of the Ark had only been exceeded in the case of the Great Eastern. In 1856 a prize was offered for the best model of a ship made by any one in the United Kingdom, and the models were on view at the Royal Institution. The prize was awarded to a model six times the beam to the length, and ten times the depth to the length, these being the same proportions as those of the Ark. TORN TO PIECES. A dreadful fatality took place Monday morning at the machine shops of the Monday rolling mills. William Wilson, who was over 50 years of age, had been in the employ of the firm for some time past, and was supposed to be too careful a man to become the victim of such a terrible accident as that which occurred Monday morning. Wilson was alone at the lathe when, when it became evident to those outside that something had gone wrong, and sure enough upon running into the apartment where the poor man was last seen alive an awful sight met their eyes. It appears that Mr. Wilson had been caught in a belt propelled at lightning speed and his body hurled upward to a frightful height. When found the trunk alone remained, as both legs and arms had been torn from the body. The fragments were put together and the mangled remains of the unfortunate man were removed to the general hospital. Husband—You'll have to wait half an hour for your change in that big store, and I'm in a hurry. Why not go to a little store? Wife—The idea! Do you suppose I can get enough stuff for slaves in a little store?
