ACADIAN SCIENTIST.

Devoted to the Interests of Acadian Science Club, Teachers and Naturalists.

A. J. PINCO, EDITOR.

SUBSCRIPTION 35 CENTS PER ANNUM.

Special Science Issues, For the American Association for the Advancement of Science.

SCIENCE, in its five issues—August 17, August 24, August 31, September 7, September 14—contains an elaborate report of the proceedings of this year's meeting of the American Association, which takes place in Minneapolis, Minn., beginning on August 15, and ending on August 22.

These reports are to be made by thoroughly competent persons, in many cases furnished or revised by the authors of the different papers. This will furnish, almost a year earlier than the Association itself, a practically complete and partially authentic report of the entire proceeding. Moreover, as the Association no longer prints all the papers in full, any one desiring a fuller report than has heretofore been had will find, in the reports of SCIENCE and of the Association, complements of each other, and, in a combination of the two, as full a report as almost any one could desire. It is estimated that the SCIENCE report will equal fully three hundred pages of the usual Association report. To accommodate this matter, four issues will be enlarged to fifty-two pages each. It seems, therefore, justifiable again to call attention to the claim of SCIENCE upon scientific men for their support, both in behalf of its contents and its subscriptions. The Science Company aims to make it an absolute necessity for every scientific man to have on his own library-shelves a complete and bound set of SCIENCE. When eminent scientific men throughout the country unite in contributing fifteen hundred quarto pages of text, all of which is minutely indexed (twice a year), well printed, and appropriately illustrated, it certainly seems that every scientific and well-educated person ought cheerfully and unsolicited to send in his subscription at the merely nominal price of five dollars a year (six dollars to foreign countries). And it is hoped that every one who is enrolled as a member of the American Association will at once realize that he can in no other way for a like sum better aid scientific workers and keep himself informed than by regularly receiving SCIENCE. It should be borne in mind that this journal is not conducted for money-making purposes, but as an aid to scientific work. As a guaranty of its intentions, its list of officers speaks for itself. Its president is D. C. Gilman, the president of the Johns Hopkins University; its vice-president is Alexander Graham Bell, inventor of the telephone; its treasurer is Samuel H. Scudder, the president of the Boston Society of Natural History; and its other two directors are Gardiner G. Hubbard, an attorney and capitalist, and Othniel C. Marsh, the president of the National Academy of Sciences. Almost one thousand members of the Association have already subscribed; and now the publisher of SCIENCE is desirous of getting the subscriptions from all the rest, so that when a few months later he publishes a handsome volume containing the names, occupations, and addresses of all the subscribers for the first year, it will include the name of every member.

Specimen, or single copies of SCIENCE, fifteen cents each.
