

The first part of the paper discusses the
 historical background of the problem.
 It is shown that the problem has been
 studied by many authors, but no
 general solution has been found.
 The second part of the paper discusses
 the mathematical aspects of the problem.
 It is shown that the problem can be
 reformulated as a boundary value
 problem for a second order elliptic
 partial differential equation.

The third part of the paper discusses
 the numerical aspects of the problem.
 It is shown that the problem can be
 solved numerically by using the
 finite difference method. The results
 of the numerical solution are shown
 in Figure 1. The fourth part of the
 paper discusses the physical aspects
 of the problem. It is shown that the
 problem is related to the flow of
 a fluid through a porous medium.
 The fifth part of the paper discusses
 the conclusions of the paper. It is
 concluded that the problem is a
 difficult one and that more work
 is needed to find a general solution.
