

1830

FEBRUARY hath 28 Days.

The wind is bitter keen—the snow o'erlays  
The hidden pits, and dangerous hollow ways,  
And darkness will involve thee—no kind star  
To night will guide thee Traveller,—and the war  
Of winds and elements on thy head with break  
And in thy agonizing ear the shriek,  
Of spirits howling on their stormy car  
Whose ring appalling.

Full Moon, 7th day, 8h. 18m. afternoon; Last Quarter, 15th day, 8h. 14m. afternoon; New Moon, 23d day, 0h. 22m. afternoon.

**Men raised by Merit.**—That industry and application will accomplish almost any thing, is beautifully exemplified by the success of some of the greatest men in the civilized world, who have obtained to eminence from obscurity and indigence. Hutton the great geometrician was a Coal heaver. Haddart the machinist and mathematician was a shoemaker. Brinley the Civil Engineer, who planned and executed the immense Canals of the Duke of Bridgewater, was an untaught and common labourer. Arkwright who invented the machinery of the Cotton mill, which eventually established the manufacturing pre eminence of England, was a barber. The United States too is prolific of instances. Franklin was a journeyman printer; Rittenhouse was a plough boy; Fulton the discoverer of the power of Steam in propelling vessels and thereby the donor of one of the greatest gifts bestowed upon man, was a poor youth; John Q. Adams and William H. Crawford spent the first years of manhood in "teaching the young idea how to shoot," and Henry Clay, Daniel Webster, and Martin Van Buren spring from poverty.

**Prevention of Suffocation.**—In an English Miscellany we find the following fact stated. The danger of being suffocated by smoke to which persons are exposed who enter premises on fire, may be effectually obviated by tying a wet silk handkerchief over the face.

Contentment is not procured with riches, but by mastering our desires.

First Q morning; 10h. 30m.
