Buy This Canadian No Trouble To Separator Get Parts

During the continuation of the war, purchasers of Cream Separators should exercise great care in the selection of their machines. They should make certain that they can get quickly ail parts of their machines, in case of accidents. And accidents will occur once and awhile you know—and generally at the most inconvenient

Cream Separators can get repair parts quickly. If our agent happens to be out of a part, he can get it for you immediately from the factory where a complete stock of repair parts are always on hand.

A cream separator that stands idle is a dead loss to you. To avoid the possibility of such a contingency, let your choice be the Canadian-made Standard.

The 1915 Model is now on exhibit at our agencies. It is a big step in advance of others some say years ahead. The interchangeable capacity feature alone is sufficient reason for

Made in Canada

ecting it in preference to other kes. But there are twenty-o main features that make it oreme. Get our nearest agent explain, or write for the latest tion of our Separator Catalog.

Departmental Activity

On July 10th and 11th Mr. Geo. H. Barr, Chief of the Dairy Division, judged the dairy exhibit at the Canadian Industrial Exhibition, Winnipeg. There was a large number of exhibits, but the feature was the high, and its but the feature was the high quality of the butter from creameries in Al-berta and Saskatchewan and the improvement in quality over former years in the entries from the Manitoba creameries. In the latter province, the grading of cream supplied to the creameries by the individual patrons is being practiced for the first time this season and the beneficial results this season and the beneficial results arising therefrom are already apparent. The principle of payment for cream on a quality basis is now firmly established in the three western pro-

An officer of the Dairy Branch (Mr. Jos. Burgess) acted as judge in the dairy classes of the Calgary Industrial Exhibition which was held during the first week in July. The fine quality of the butter exhibited may be judg-ed from the fact that in the three classes for creamery butter the first five awards in each scored between 97.25 points and 98 points. It is seldom that butter at any exhibition is good enough to receive a mark of 98 per cent.

The Inspector of Weighing of Butter and Cheese at Montreal has been kept very busy investigating the dif-ference between the weight marked in the boxes of cheese and that reported by the public weigher. In all cases where a serious difference has been shown the inspector has visited the factory and in a number of instances he found that the scales were defective, and in others that sufficient care was not taken in weighing the cheese. The fact that a competent man has been appointed by the Government to check the weights of but-ter and cheese at Montreal is appar-ently appreciated by the factorymen and the information they receive from him, coupled with his personal visits to the factories, should cause an improvement in the weighing of cheese and thus considerably reduce the num-ber of complaints received by this Department yearly regarding short weights.

The Dairy Division has received an encouraging report regarding the operation of the Clare creamery, which are received in June, 1913, in Sulminerville Parish, Digby County, N.S. The total output last season was about 15,000 lbs. of butter, but this year it is expected that by the end of July at least 22,000 lbs. of butter will have been manufactured. The cream gathering system is used. A dairy record centre has been established in connection with this creamery. The Dairy Division has received an

I believe that just as soon as we give our patrons a chance to vote on cream grading they will pass it.—L. H. Newman, Victoria Co., Ont.

In our experimental work at the In our experimental work at the chairy school we have compared Monday and Tuesday milk for cheese making. The milk coptained the same per cent of fat and casein, but we made much less cheese from the Monday milk, and that of inferior quality. The advanced acidity is some cans of Monday milk brings the casein into solution.—Alex. McKay, Cheesemaker, Guelph Dairy School.
