

**T**HOUSANDS of dollars are lost by Canadian farmers through the use of poor separators.

With butter selling between 60c. and 80c. a pound, it does not take long for a poor separator to lose enough butter fat, from an average herd of cows, to pay for a good machine.

In various Tests made at Government Dairy Schools the

## *Renfrew* Cream Separator

has demonstrated that it gets 99.99% of the cream out of the milk.

So it is a matter of dollars and cents in extra "butter money" for the farmer to use the Renfrew, because it saves him real "cream money" that would otherwise be thrown away in the skim milk.

### Easily Cleaned

All the parts of the bowl, the supply can and the spouts are made of highly polished metal. There are no rough corners hard to get at. Every part is readily accessible and can be easily scalded and rinsed.

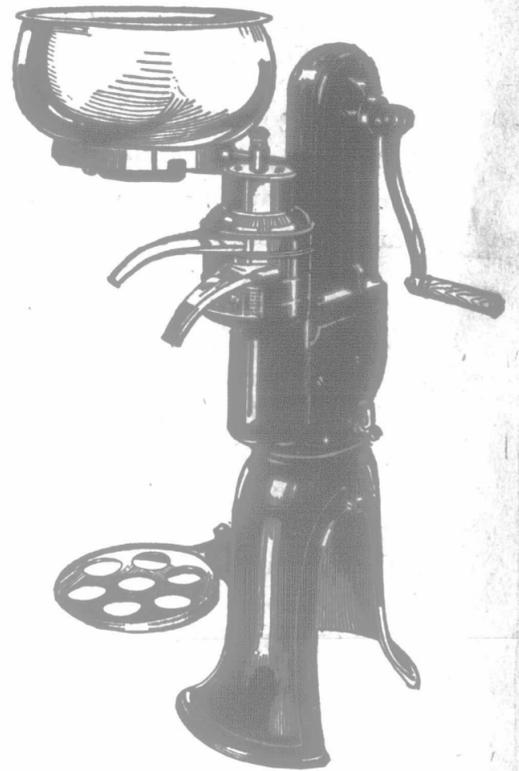

The working parts are enclosed in a dust-proof and oil-tight casing. No dust or dirt can enter into the gears. As all the gears run in a bath of oil in this oil-tight casing it is only necessary to oil four times a year.

No oil can ever leak out on to the frame of the Renfrew Separator and then on to the floor. Think what this means in cleanliness!

## The Renfrew Machinery Company, Limited

Head Office and Works, Renfrew, Ontario  
Branches: Montreal, Que., Sussex N.B., Milwaukee, Wis., U.S.A.

Other Lines: Renfrew 2000-lb. Truck Scale, Renfrew Oil Engine, Happy Farmer Tractor

### A Money Maker For You

The Renfrew Separator will save you more money than any other machine used on the farm because it gets all the cream and saves much time and labor.

Write to-day for "Booklet" on the Renfrew Separator—"the all-Canadian Separator." *Buy Canadian made goods to keep Canadian money for Canadian trade.*
