

30 PERCHERONS

Also Shires, Hackneys and Clydes, have just arrived with our new importation from Scotland, England and France, of high-class stallions and mares. Many of them prizewinners in their native lands. Bred by the best breeders. Percherons, blacks and grays, weighing 1,600 to 2,000 pounds. Shires at two years old weighing 1,700 pounds. Clydes, bays and blacks, 4 and 5 years old, weighing 1,800 to 2,000 pounds, bred by the best in Scotland. Our Hackneys are bays and chestnuts, combining size, quality and breeding that cannot be beaten. We have a few first-class young stallions that we will sell at cost, to make room for our next importation; and all for sale at reasonable prices.

Clydesdales, Percherons and Hackneys

I have still on hand 12 Clydesdale stallions, 4 Clydesdale fillies, all imported; Scotland and Canadian prizewinners; 3 years old, that will make 2100-lb. horses of choicest quality and richest breeding; 4 black Percheron stallions, 3 years old, big, flashy, quality horses, and 6 Hackney stallions, 1st-prize and championship horses among them. Will sell reasonable and on terms to suit.

DR. T. H. MASSARD, Millbrook P.O. and Stn.

GRAHAM BROS.

Graham & Renfrew's CLYDESDALES and HACKNEYS

Our Clydes now on hand are all prizewinners, their breeding is gladdened. Our Hackneys, both stallions and mares, are an exceedingly high-class lot. We also have a few high-steppers and carriage horses. Yonge Street cars pass the door every hour. 'Phone North 4488.

GRAHAM & RENFREW, BEDFORD PARK, ONT.

QUESTIONS AND ANSWERS. Miscellaneous.

TO RID COLT OF FLEAS.

Could you tell me what is the best way to rid a two-year-old colt of fleas? I thought of clipping him, and washing with something. What would I use?
SUBSCRIBER.

Ans.—Clip him, and dust with insect powder from a flour dredger.

ROOFING MATERIAL.

Can you or any of your numerous readers give me information as to the best and cheapest (considering durability) kind of roofing for a barn. Shingles in the present day do not seem to have the wear in them they formerly had, and if there is any improvement in other material, should be glad to know what about the roofing?
MUSKOKA SUBSCRIBER.

Ans.—There are a large number of good roofing materials being advertised in these columns, and full information about each, with prices and testimonials from users, may be had on application. For us to advocate one or another would be invidious, to say the least. We advise all inquirers to write the manufacturers.

AILING CALF.

Calf, three weeks old, did splendidly for the first week, then for a couple of days refused to take its milk, but has taken it all right since. Its feet and knees swelled, and got stiff. It gets up to drink, but lies right down again, and remains lying till feeding time again. Has been getting three quarts of new milk twice a day. Has been kept in a dry, well-bedded pen. Would you kindly advise as to what is wrong, and what would effect a cure?
SUBSCRIBER.

Ans.—This is not a common ailment, and is evidently not of a serious nature, but difficult to classify. It is well in most ailments to give a mild purgative—in the case of a young calf, one to two tablespoonfuls of castor oil or twice as much raw linseed oil, reducing the quantity of milk for a day or two. Rubbing the swollen limbs with heated vinegar would tend to reduce the swelling.

CURE FOR GREASE.

A stallion, two years old, took grease heel last fall; have tried numerous remedies, but to no effect. What do you advise?
SUBSCRIBER.

Ans.—Prevention consists in feeding moderately to lightly with grain, and exercising regularly when not working. Curative treatment consists in purging with 8 drams aloes and 2 drams ginger, prepared by a druggist, and given as a ball, feeding bran mash till purged. Follow up with 1½ ounces Fowler's solution of arsenic twice daily for a week. Local treatment consists in applying warm poultices of linseed meal with a little powdered charcoal every six or seven hours for a couple of days and nights, and then applying, three times daily, a lotion of one ounce each of acetate of lead and sulphate of zinc and 2 drams carbolic acid to a pint of water.

THE PROMETHEA EMPEROR MOTH.

Mr. S. T. Pettit, of Elgin Co., has sent "The Farmer's Advocate" a cocoon taken from a plum tree, respecting which he desires some information. He states that there were three on the same tree and that he had sometimes seen similar cocoons on other fruit trees. The one sent is wrapped in a leaf and tied to the stem by a band of silk so that it is securely fastened, and remains all winter attached to the tree without being affected by any storms. The cocoon is that of the Promethea Emperor Moth, one of the silk-producing moths that we have in this country. The caterpillar feeds upon a great variety of trees and shrubs, and the cocoons are more commonly found on lilac and ash than on any other trees. Though the caterpillar is a good size, it is never sufficiently numerous to cause any appreciable injury. The moths are remarkable in the difference between the sexes, the male moth being almost black, while the female is of a paler brownish color, with broader and less elongated wings. They are very handsome creatures and can easily be obtained by keeping the cocoons in the house at this time of year.
