STAR ATTRACTS MUCH ATTENTION

Professor Plaskett, Director of the new Observatory in British Columbia, has made an interesting communication on a star that he has been observing. It is in the constellation Monoceros, the Unicorn just to the left of the well known Orion, and lies in the middle of the Milky Way. It is a sixth magnitude star, which means that it is just visible to an acute eye.

Nothing remarkable was noticed about it till the spectroscope was applied. This instrument spreads out the light of the sun and stars into a long rainbow-tinted ribbon crossed by dark lines, due to absorption of light by the gases in the solar or stellar atmospheres. The spectrum of this star showed the various lines double, whereas in the sun they are single. This is known to indicate that the star consists of two components in rapid motion round each other.

In the present case Prof. Plaskett finds that the two stars fifty-six million miles apart, while they go round each other in a fortnight. A body going round the sun at the same distance would require six months for the circuit and it is calculated that the two components of the Plaskett star are respectively ninety and seventy times the mass of the sun, making the pair the most massive star system known.

So far, the results are pretty certain. What follows is more speculative. The diameters of the two

HER RECOVERY IS AMAZING TO MANY FRIENDS

Mrs. McArthur Tells How Tanlac Brought Complete Relief From Stomach Trouble That Was So Bad She Couldn't Walk Up The Stairs—Gains Weight too.

"My friends all express surprise over the fine change in my health, and I always tell them how Tanlac caused my improvement," said Mrs. Kenneth McArthur, 52 S. Bentinck St., Sydney, N. S.

"I was dreadfully weak and run down for six years, suffering from a bad form of stomach trouble. No matter how careful I was of what I ate I had awful attacks of indigestion. I had trouble with my heart skipping and jumping, but I know now it was due to the condition of my stomach. I was nervous and miserable, getting little rest day or night, and so fagged out I couldn't climb the stairs."

"I began taking Tanlac just in time for I had almost lost hope. Now I am feeling like a different woman. I have a hearty appetite, eat anything, sleep restfully and have gained weight. I think Tanlac is truly wonderful."

Tanlac is sold by all good druggists.

stars are given as eighteen million and sixteen million and each square mile or their surface is estimated to give forty times as much light as a square mile of the sun. If the two stars were placed at the sun's distance from us they would give thirty thousand times as much light as it does. They are so remote that their light is supposed to take some ten thousand years on the journey, so that the light now reaching us left them long before the dawn of history. None of these wonderful results could have been obtained till the application of the spectroscope to the stars, which dates only some sixty years back.
