substitution of the control of the c

are well adapted to the requirements of some farms, might prove worse than useless to others. The farmers, before adopting it extensively, had better try it on a small scale —construct it with care and judgment, so that the trial may be a fair one. The slope of the ditches should depend in a great measure on the stiffness of the soil of which it is composed, and of course their depth and the height of the ridge will be greater

or less as they are more or less slanting.

Near the village of Oshawa may be seen some of the fences alluded to, which have given such general satisfaction that they

two inches by opening new drills. On the top of these drills, after being a little flattened, I sow about 1able, of seed per acre, with a seed sower,—if by hand, a small opening must be made for the seed with a hoe. The seed should be sown when the land is dry, and shortly before rain, if possible. I have found the best time of sowing to be from 5th to 20th June. The beest remedy I have found for the fly is thick sowing, although I understand that if bran be sown on the young turnips when wetwith dew, they will suffer less. So soon as weeds appear I pass a cultivator between each drill. When the plants put forth the rough leaf, which is generally about the tenth day after sowing, I pass along the drills with a hoe, striking out all but two plants in each six inches. About ten days after, I thin out to six inches, filling up vacancies with the plants thus drawn. On the last thinning depends much of the future growth. It is done with both hoe and hand the tops of the drills being nearly levelled, and the soil being well cleared away from the turnip, it would not attain half its size, besides being more liable to be injured by grubs and worms. After this operation, the young plants will fall down and appear to wilt, but the inexperienced away from the turnip, it would not attain half its size, besides being more liable to be injured by grubs and worms. After this operation, the young plants will fall down and appear to wilt, but the inexperienced away from the turnip, it would not attain half its size, besides being more liable to be injured by grubs and worms. After this operation, the young plants will fall down and appear to wilt, but the inexperienced away from the turnip, it would not attain half its size, besides being more liable to be injured by grubs and worms. After this operation, the young plants will fall down and appear to wilt, but the inexperienced away from the turnip, it would not attain half its size, besides being more liable to do the plant the provided the required clearing of the land, which

They may now be left to themselves for some weeks, until they begin to crowd, when they should be thinned to twelve inches apart—the drawn turnips affording an excellent food for cows, hogs, &c., as well as for market purposes. The hoe should then be drawn through between every plant and the cultivator passed up the drills. A light furrow might also be opened with a plough to carry off the water. They will seldom require more.

seldom require more.

The expense of cultivating an acre of turnips after this mode, may be summed up

thus:
Ploughing, Harrowing, and Drilling 4 days at 15\*. £3 0 0.

Manure carting and spreading, ...... 9 0 0

Cultivation, one day in all in the carting and spreading, ...... 9 0 0 in all, ..... 0 10 0 Hoeing and weeding, 0 15 0

-£13 . 5 I estimate the turnips as worth, on the ground, is. per bushel, which is, 640 bushels, .....£52

—leaving nett profit, .....£18 15 0
—besides having two months' valuable feeding from the drawn turnips and tops.
Carrots are cultivated much after the same manner, with the exception that the land ought to have another ploughing, and about ten leads more of manure. The hand about ten loads more of manure. The hand is also to be used instead of the hoe in weed-

BENEFITS OF AGRICULTURAL SOCIETIES.—
We have often remarked, says the Albany countries of a cheap and durable kind of fence.—
Lo most parts of Canada where timber is plenty, the common zig-zag rail fence an ewers the settlers for a few years, but as is already the case in some districts where timber has become scarce, some other mode of fencing our farms may be resorted to with advantage.

Where the soil is of stiff clay, the following plan possesses some advantages on account of its durability and cheapness. It consists merely of two parallel ditches, with a ridge of earth piled between them: small ty, should be generally known and univerthe plan possesses some advantages on account of its durability and cheapness. It consists merely of two parallel ditches, with a ridge of earth piled between them: small posts, (usually cedar.) five feet long and from six to eight inches in diameter, are set about six inches in the ground and ten feet apart, in a line where the ridge is intended to be raised; the ditches are then dug about two feet deep and three feet apart, the sides of which are of such a slope at the becapable of producing a tolerably stiff sod from being sown with grass seed. The ridge, which is raised about 2½ feet high, should, like the ditches, be sloped on each side, so as to admit either of a covering of sods directly or of being produced by seeding. It may be remarked here, that it is important that the work be performed in the spring of the year, when it cannot only be done cheaper but rendered less liable to sustain injury from the freets of the ensuing winter, than if accomplished at a place period. On the posts which with a war, with a war in the meaning winter, than if accomplished at a place period. On the posts which will be proveded to accomplished at a place period. On the posts which will be proveded to the posts with a line of the county assemble once a year; become acquainted, promote kindly to feel the posts which will be provedent in the posts with a large products are exhibited, as an example and incitement. Here, we have an opportunity five where a products are exhibited, as an example and incitement. Here, we have an opportunity five where a population of viewing and comparing, the best spring of the most successful systems of agricultura.

Here, we have an opportunity five where an exhibited, as an example and incitement. Here, we have an opportunity of viewing and comparing, the best spring and comparing, the best apricultural impliments. There, we have an opportunity five wing and comparing, the best apricultural impliments. There, we have an opportunity five side products are exhibited, as an example and inciteme year: become acquainted, promote kindly feelings; converse freely with each other, on those subjects most interesting to ther What can be better calculated to teach us to do well ?"

what can be better calculated to teach used one side, when the fence will be complete. The advantages of this kind of fence over a board fence are considerable. First, it effects a great eaving of timber: secondly, in low or wet land it answers the double purpose of a fence and drain: finally, it is more permanent, as the posts are less hiable to be raised by the frost than those of an ordinary board fence, the earth in which they stand being kept comparatively dry by the ditches, and placed around them has oval form, will naturally incline from them as the frost works its way under the surface.

I am aware that some farmers will say that "It appears all very well on paper," but I can assure such that fences of this description have been in use in this District for the last fony or five years, and thus graded the teach us do do well?"

I have not as yet had any constructed on the sude of the action to the slug tribe. With respect to the quantity, that must depend on the nature of the soil. In April last, having the recently obtained possession of a garden, &c., that had been greatly neglected, and was overrum with slugs, I spread quickelime over the whole, (vegetables, abrobe, grass, and orchard,) at the rate of about 80 bashels to the acre, so that all through that month we appeared to be in the midst of winter, with the ground covered with snow, even the evergreens being was seen till the rains of October, and but very few then. The vegetables have been to the surface. was seen till the rains of October, and but very few then. The vegetables have been my own farm, and cannot therefore say from experience what would be the expense of such a fence, but am credibly informed that it need not exceed two shillings per rod.

But this fence, like many ether things that are well adapted to the requirements of some

## FOR THE SETTLEMENT OF THE CROWN LANDS,

WELLINGTON & HURON DISTRICTS.

Near the village of Oshawa may be seen some of the fences alluded to, which have given such general satisfaction that they are becoming more generally adopted in that section of country the soil is clay with a slight mixture of gravel. Very light or sandy soils would be ill adapted to such a purpose.

Whitby, March, 1849.

Ma. Inglew's Report on Turnip Cuttivation of turnips is as follows:—I take cultivation of turnips is as follows:—I take cultivation of turnips is as follows:—I take land from which I had previously taken a crop of oats, without manure from sward; this I plough across and harrow thoroughly. I then run out drills two feet spart, into which I put thirty double horse-loads of barn manure to the acre at this I cover about two inches by opening new drills. On the tonches drills, after being a little flat tened, I sow about 1½ be. of seed per acre, with a Certificate abeli mantion to the Arent.

of 66 feet, and the land on each side will be divided into lots of 50 acres each, to be gra-

Besides the principal Road there will be two others (one on each eide of the princi-pal Road) marked out on the whole extent f the territory, and on which free Loca-ions of 50 acres will be made: But as the Government only intend to

meet the expenses of Survey on those ad-ditional Roads, the Grantees will have to open the road in front of their locations. The most direct route to reach the Agency on the Garafraxa Road is by way of Guelph and Elora in the Wellington District GEORGE JACKSON,
Agent for Settlement of the Durham Road.

New Church in Stratford. New Church in Stratford.

SEALED TENDERS will be received by the subscriber on behalf of the Presbyterian Church Building Committee, Stratford, till noon of the 31st December next, for providing materials, viz., Bricks, Lime, Stone, Sand, Seasoned Lumber, and Work, for the Erection of a BRICK CHURCH, proposed to be built at Stratford. Tenders may be made either for the whole or for any particular part of the materials, and according to Specifications as proposed by Mr. Peter Fergusson, Architect, Stratford.
