THE NEW PUBLIC HEALTH

QUESTIONS. ANSWERS. COMMENTS. Conducted by Institute of Public Health, London, Ont.

Questions should be addressed "The New Public Health," care The Advertiser, London, Ont." Private questions accompanied by a stamped, self-addressed envelope, will receive private answers. Medical treatment for individual cases cannot be prescribed.

How do you account for a person feeling weak and ill day after day, particuarly so in the morning, but apparently gaining strength and feeling almost quite well by evening? L. N. B.

physiology of the body in health and one patient before going to another? and elsewhere in Ontario. disease, and all related matters. But the application of these principles to individual cases demands first, las and all the time, a diagnosis, that is. clear, definite knowledge of the particular thing or things in which the particular case has departed from the proper condition of health. Symptoms, as figured out and described by

patient, gives, as a rule, almost no clue to the real trouble. The patient recogmizes, as a rule, only the schedule and washes the hands, is practically for its own members should apply to metely surface evidences of something amination of a trained physician, and ago after scarlet fever, diplitudence, may be arranged for in the meantime, reviewed and extended. Problems are notified to so, that these surface symptoms R. I. Director of fearful relating to Sabaci Hugiana. Flior San

To bring this down to your question, the symptoms you describe might due to fifty different troubles; serious or not serious; easily corrected or re- t quiring extremely radical treatment; or, perhaps, incurable. A thorough examination, the securing of a real diagnosis is the first step to take.

-H. W. HILL.

GRANDMOTHER. Do you believe in feeding children by rule? Do you not think that the majority of children are underfed? GRANDMOTHER.

Answer-These are questions to answer without conveying a wrong impression, Children fall into three general groups as regards feeding, according

The infant, that is the child under one year old, has but one natural staple article of diet, the mother's Certain, more or less fixed rule can be advocated for general guidance concerning the amount and frequency of such feedings; but the most im portant one, is to so feed the bab that it is happy and comfortable and grows fast. In individual cases, the advice of a trained expert is always

useful, particularly for a first baby Many mothers feed even infants with far less skill or judgment than an good farmer expends on feeding hogs. The child from one year to four o six is still growing fast, and being in troduced daily to new things, in every direction. The diet can be very wide. if judiciously experimented with in small quantities and with fair regu-Indeed by the time the child

is four to six years old, it should be able to eat any of the ordinary good staples, that any adult eats with bene fit; not in the amount, of course: no in the variety at one time, perhaps but in general, there should be little left by this time that the child's stomach is stranger to. As the child grows older its in

dividual requirements will show themselves more and more, varying widel as to amount and even as to kind, with different children, and with the same child at different times. So long as the bowels are regular and there no indigestion, so long as the child normally bright, energetic, active and inquiring, any and everything is gris for the mill and a reasonable variet amongst the three chief foods, proteids (meat, eggs, fish, etc.), carbohydrates (sugar, fruit, starch, vegetables, etc.) and fats, should be secured. Children like sweet things; our forefathers thought this was a good reason why they should not have them, just a they deprived fever patients of drinking water, and shut out all air from pneumonias and consumptives! But ve perceive that nature, in general, ses learned a little something in the busands of years she has been at the business; sugar is good for children, and for adults, in almost any

ordinary form. The fact is that all foods, excep perhaps, mother's milk, are more or less unsuited to the body at first, and that the body must get used to them before it can benefit.

You may have read Kipling's story of the steamer on its first trip across the Atlantic; every rivet and frame and stringer, and every part of the great engines groaned and creaked and protested, in the first agony of the newness of everything. True every calculated, formed and cast for just at the intelligent and natural expresivet, frame and stringer, every valve

Into sacrificing are admired, the treacher-It is the object of the institute to our and self-eeking are despised. all disease, and especially for the give his attention to battles and wars. But these are not given the centre of the stage, and no longer usurp all the time that should be given to the his-

tory of social conditions, and the development of crafts and industries.

GEOGRAPHY. the VII. on the geography of Europe. It home of most of the modern nations. morning, and I want to retain you The British Empire especially is of my suit against the company fo nterest to young Canadians. How damages," iid an island of such position and size become the heart of so great an empire? What do its teeming millions manufacture? What are its resources

of sea, and mine? What is the size of ts mountains and river? An attempt is made to connect the snown in the pupil's mind with the inknown, to be learned by drawing tiention to articles that have come from across the Atlantic, toys made n Germany, lace brought from Ireland, fruits grown in Greece, Italy or Spain. The pupils also know people who live among us, who have recently ome from these distant countries. Maps, pictures and charts are used. Pupils draw outline, model raised maps, collect products, arrange pictures in scrap-books and in many ways enter into co-operative activity with the teacher, who guides, encourages, and suggests. The geography of North America is continued from the work in the lower grades. Canada and especially Ontario is studied in detail. A comparative study of the size, climate, population, resources, and industries of the pro-

Both hygiene and physicial training fresh air contains; how fresh air is begun, it has been defined as the science of the sentence, and as such, is engaged in analysis and as such, specially and specially an process of digestion; simple facts about circulation, etc. The pupils are encouraged to take pride in a strong, robust body. It is the foundation of strong mental life. Common sense and Herbert Spenser both say that the first requisite is to be a good animal Our lives are in the flesh, our spirits embodied, and therefore health beautides and perfects not only the body but also the soul. The boy who takes pride in clean surroundings, clean lothing, and clean body will be more o cherish clean thoughts and

MANUAL TRAINING.

Manual training is given in this grade, that the pupils may come into mmediate touch with some of the ery things that text books talk about. Manual training is not industrial training, nor is it merely training of the hands alone, but rather it is training of the personality through the use of the hands and mind at the same time. When a boy neatly makes omething, he feels the uplift of imachievement of personal nediate power. He feels the joy of the true craftsman. He realizes that his thoughts and ideas have become tangible and visible. This has a moral eaction. Suppose all thoughts took risible form, would it not startle some of us to look up and see the distorted figure of our habitual thoughts. Handwork must be true and clean to be worth while. in concrete form cannot be hidden. MUSIC.

The work in music includes songs Time is represented by a and excercises in two and three parts; line, or other suitable diagram. The familiarity with all the tones of the pupils arrange upon this the names major scale, in all keys. The minor institute, and it exists for this pur-pose chiefly, to make use of every learned. They thus learn the relative of emphasized that we sometimes position in time of present knowledge. forget, that to think intervals in the Most of the world's great contagious means to discover the real truths position in time of present also the different periods scale accurately, and to express the disease experts have never known about health, and then to make these They learn also the different periods scale accurately, and to express the personally of the clothing of attend- truths public by every means at its into which our history naturally falls, tones clearly demands a development excelled in grammar and arithmetic The course in composition, art, and writing is continued and extended, as every subject is to encourage 'doing,'

It is amazing how much effort royal sweetheart, Princess Augusta second cousins, but had never met unof it. It is amazing how much effort a boy will expend in learning words that he really feels a need of knowing. The habit of correct spelling is usually fairly easily fixed, if the child can be persuaded to visualize clearly, and pronounce carefully. If this habit the Catholic branch, and the consent of the Latholic branch, and the consent of the consent of the catholic branch, and the consent of the catholic branch are called the catholic branch, and the consent of the catholic branch are called the catholic branch are cal

You Don't Buy a Gas Range Every Day

See that you get one that embodies the three essentials of a Good Gas Range-

Economy :: Ease in Cleaning

McClary gas ranges possess these qualities. They possess every feature found by practical test to be an advantage. The result is a gas range that will give the best results with the least labor and expense.

CONSIDER THE SIMPLE CONSTRUCTION OF THIS

A cooking top of east iron large enough to take a wash boiler either way.

Four large star burners and one simmering burner constructed to give the maximum heat with a low gas consumption—all removable.

Removable aluminized linings in the ovens retain the heat and cannot rust.

A cast iron oven bottom which makes uniform baking a certainty.

Fire-proof white enamel drip and broiler pans.

The best valves made which don't go wrong or leak, Strong and rigid frame

with doors of hammered steel A hard baked black enamel finish-easy to clean and always bright.

ASK YOUR DEALER TO SHOW YOU
