

# Lesage Fertilizers

Fertilized

Unfertilized

## Use Lesage No. 162 Fertilizer to Obtain Best Results

Why take half a crop when a whole one is possible, it is largely a matter of fertility, and the best part of it is that the more fertilizer used the easier it is to pay for it, the extra crop takes care of that, but remember **Lesage Fertilizer** should be used.

Never use stable manure in an orchard when you have any other place to put it, bone and potash produce healthier bearing wood and give a better color and flavor to the fruit, than coarse nitrogenous manures. Use from 500 to 1000 lbs. **Lesage No. 162 Fertilizer** per acre according to fertility of land and crop promise.

### BASIC SLAG

OR

### THOMAS PHOSPHATE POWDER

Many fruit growers have had truly remarkable results with Basic Slag.

We highly recommend it in cases where Clover is grown and ploughed under, as clover furnishes the nitrogen required. Basic Slag supplies in itself no Nitrogen or Potash only Phosphoric Acid and Lime.

We have the largest stock and lowest price on this material in Canada.

**Lesage Fertilizers** supply **Nitrogen Phosphoric Acid**, and **Potash** in correct proportions and in Splendid Mechanical Condition.
