

done at this institution. From his head to his knees his physical condition was normal, but from his knees down he was not so. This lad had a dog and a sleigh, to which he harnessed the dog and drove down in winter time to the Children's Hospital from Uxbridge, not having other means of getting there and being bound to get there somehow. The right leg below the knee was rudimentary, eight inches in length. There was but one bone in the leg—the tibia. There were only four metatarsal bones and four toes. The foot was turned, looking directly upward in the direction of the knee. The toes were also webbed. Dr. Bingham amputated at once and obtained an excellent stump. The bones of the left leg were twisted inward. The internal malleolus was lower than the external; as a matter of fact he walked on the internal malleolus. The metatarsal bones were turned inward toward the toe. This leg was perfectly useless, and the problem was what to do with it. Dr. Bingham chiselled the bones and broke them down in order to bring the foot back into proper relation with the leg. There was great difficulty in getting the bones to coapt properly.

Dr. Meyers' motion to elucidate the meaning of Clause 2, Article IX of the Constitution, fixing the April meeting of each year for the nomination of officers, was carried.

Dr. Pepler, as treasurer, was authorized to remit \$25 to Dr. Conerty, of Smith's Falls, and also to open a subscription list towards a fund for Dr. Conerty from members of the Clinical Society.

GEORGE ELLIOTT,  
*Recording Secretary.*
