

Through the Agriculture Value Chain Initiative, Canada supported efforts that:

- promoted sustainable agroforestry practices by small-scale coffee producers;
- increased yields and quality;
- gained access to higher-value markets; and
- helped 23 organizations improve their financial, administrative and marketing skills.

The daily income of 849 small-scale producers directly affected by the project increased from US\$1.25 in 2007 to US\$7.87 in 2016. Eight of the 23 coffee organizations supported by the project were able to access international markets in Australia, Austria, Japan, Korea, the U.K. and the U.S. As well, 12 producer organizations received organic and environmental coffee farm certifications. This has enabled them to negotiate higher prices for their coffee.

The Promoting High-Value Cacao Agroforestry Systems project supported the planting and renewal of 3,827 hectares of cacao. This represented 75% of Honduras's total cacao surface. The Honduran Foundation of Agricultural Research implemented this project. It provided 3,508 families with support and created 2,818 full-time equivalent jobs. Income generation increased 522% to US\$2,192.74 per hectare per year.

The Promoting Food Security in the Choluteca and Rio Negro Watersheds Project focuses on agricultural productivity, diversity and the promotion of sustainable natural resources management practices. The project, which operated between 2010 and 2017, reached 28,525 people in 10 municipalities in the Dry Corridor in southern Honduras, increasing daily income by 36.7%.
