

said by Sir James Kitson, "a metal which gave a tensile strain of 50 tons with an elongation of 50 per cent., was sure to make its way if the claims which Mr. Riley had made were justified by experience." At the present date Mr. Riley's claims have all been proved by actual experience.

The alloy of nickel and steel is now known as being not only practical but useful, and its uses become more and more numerous.

The future of nickel mines is thus full of brilliant promises; and as the nickel field of Sudbury is beyond doubt the largest known to-day, the time of a large prosperity for the province of Ontario, and specially for the district of Sudbury, is not far from us.
