THE MUNICIPALITY, LIMITED, TOTAL

CURRENT TRADE CONDITIONS.

The month of July has afforded manufacturers a very acceptable opportunity to devote attention to the sawing end of their business and to lumber shipments. Trade has been good but not as brisk as during the spring season. It now shows signs of improving and optimistic opinions are exseed as to fall business. The person who sees in the near future a decline in lumber, prices la a rare excep. The many advocates of a firm market point with much satisfaction to the large quantity of this season's production of both pine and hardwood lumber that has already passed out at first hands, ssuch of it for export, and the demand does not yet seem to be satisfied. Offerings of white pine have been readily absorbed, and in addition considerable southern pine has been imported. There is a beavy call for box lumber. Ten inch box and common ranges from \$16 to \$17 and 12-inch from Big to Sec.

Hardwood lumber has been bought urgently all season. The conditions have been favorable to the buyer and are likely to continue so. So much of the hardwood production is consumed by local aranufacturing industries that there is a very small quantity for export.

The shingle market is steady at the recent decline in prices. As country buildings become more nearly completed asincreased demand may be looked for. At the present time the buying is by no means inmenificant, the unfavorable feature being the heavy stock of red cedam. Upon the development of fall trade a firming up of prices may result. Manufacturers are asking \$2.70 for XXXX pine shinites and \$1.00 for XX.

OUPBEC AND NEW BRUNSWICK.

The strength of the spruce lumber market is well illustrated by the prices ruling for logs, which are probably the highest ever known. Twelve dollars per thousand was recently paid for one sufficen feet of spruce logs located above Fredericton. and at the annual sale of unmarked logs, held last week, \$13 was paid for spruce of an average quality. In order that the buyers may make a profit on the transaction it will be necessary to obtain about \$17 for deals. This figure, however, is so near the present selling price in England that there is very little bulying. Such shipments as are being made are to fulfil contracts made early in the season. The buyers of logs at these prices are, of course, not counting on a loss, and it would seem that they anticipate an advance in the price of spruce tumber. This anticipation is doubtless based on the shortage in the log supply. Recent rains have brought the main corporation" drive on the St. John river into the boom at Frederiction, but they have not been sufficient to move the stranded logs above Grand Falls. Although there has been a rise in the river, the water is still four feet lower than when the drives were abandoned. The prospects of bringing out stranded logs in midsummer are never considered good, because the water falls very fast again after a rise.

MANITOBA AND BRITISH COLUMBIA.

Lumber continues to sell very readily throughout Manitoba and the Territories. Buildings under way are being pushed forward as rapidly as possible and are consuming a large quantity of lumber, but a slight falling off in the volume of new work is reported. Prices are steady. The situation in British Columbia has been improved by the abundonment of the strike mangurated by the meh employed in the mills and wood-working factories of Vancouver. Lumber is now being delivered throughout the city as usual, and
