Botany

An Elementary Text for Schools

TWELFTH EDITION — 431 PAGES — 500 ILLUSTRATIONS — \$1.10 NET

"This book is made for the pupil: 'Lessons with Plants' was made to supplement the work of the teacher." This is the opening sentence of the preface, showing that the book is a companion to "Lessons with Plants," which has now become a standard teacher's book. The present book is the handsomest elementary botanical text-book yet made. The illustrations illustrate. They are artistic. The old formal and unnatural Botany is being rapidly outgrown. The book disparages mere laboratory work of the old kind: the pupil is taught to see things as they grow and behave. The pupil who goes through this book will understand the meaning of the plants which he sees day by day. It is a revolt from the dry-as-dust teaching of botany. It cares little for science for science's sake, but its point of view is nature-study in its best sense. The book is divided into four parts, any or all of which may be used in the school: the plant itself; the plant in its environment; histology, or the minute structure of plants; the kinds of plants (with a key, and descriptions of 300 common species). The introduction contains advice to teachers.

"An exceedingly attractive text-book." — *Educational Review*.

"It is a school book of the modern methods." — *The Dial*.

"It would be hard to find a better manual for schools or for individual use." — *The Outlook*.
