FERDY IN TEARS

ANNOUNCEMENT

FALL WHEAT SEED

N VIEW of the partial failure of the Fall Wheat crop in this Province this year, it will be necessary

for farmers to make early arrangements for the supply

of seed which they will need for Fall Sowing. Under these circumstances farmers who have on hand quanti-

ties of wheat suitable for Fall Seeding are urged to

conserve them for this purpose. If there is no demand

locally, the information should be supplied to this De-

partment, or to the Local Office of this Department

in your County, so that every effort may be made . to

have an equitable and satisfactory distribution. The

need for foodstuffs justifies, a large acreage of Fall wheat in this Province again this year, and the co-oper-

ation of the farmers in the mobilization and distribu-

DETROIT WINS OUT AGAINST RAILWAY. Ordinance Enforcing Five

Cent Street Car Fare is Upheld.

Detroit, Aug. 13 .- Efforts of the Detroit United Railway Company to prevent enforcement of an ordin' ance reducing to five cents the rate on local traction lines failed this forenoon when United States District Judge Tuttle refused to hear the plea of the company for a restraining writ. Judge Tuttle declared the case had no place in his court and he severely criticized the attitude of both the city and the traction company in the fare controver-

What Is Man?

A man weighing 150 pounds approximately contains 3,500 cubic feet of gas, oxygen, hydrogen, and nitrogen in his constitution, which at 80 cents per thousand cubic feet would be worth \$2.80 for illuminating purposes. He also contains all the hecessary fats to make a 15-lb, candle, and thus, with his 3,500 cubic feet of gases, he possesses greatilluminating possibilities. His system contains 22 pounds and 10 ounces of carbon, or enough to make 780 dozen or 9,360 lead pencils. There are about 50 grains of iron in his blood and the rest of the body would supply enough to make one spike large enough to hold his weight. A healthy man contains 54 ounces of phosphorus. This deadly poison would make 800,000 matches, or enough of poison to kill 500 persons. This, with two pounds of lime, makes the stiff bones and brains. No difference how sour a man looks, he contains about 60 lumps of sugar of the ence how sour a man looks, he contains about 60 lumps of sugar of the ordinary cubical dimensions, and to make the seasoning complete must be added 20 spoonfuls of salt. If a man were distiled into water he would make about 38 quarts, or more than half his entire weight. He also contains a great deal of tarch, chloride of potash, magnesium, sulphur, and hydrochloric acid in his system.

Boches Use Battle Axes.

In a little curiosity shop in Montparmasse (Paris) I was attracted by the excellent quality and low price of a steel battle-axe and mace, both of small size, but most beautifully damascened, and handled with tanned anakeskin. Later an Anzac friend brought me two more, and told me of 27 being captured in one raid on the boche trenches. There was no doubt of their age and authenticity; but how they ever made their way from the Orient to the boche front is a mystery. They are powerful weapons and well adapted for trench warfare as it is waged in 1918, in competition with bayonets, daggers and brass knuckles.

FOCH PRAISES PRINTERS
Scranton, Pa., Aug. 14.—At the opening session of the International Pypographical Union in this city yesterday, President Marsden O. Scott read a cablegram from Marshal Foch addressed to the printers saying:

"The factory, like the trench, is a post of combat. The duty is not to abandon it before the enemy. My compliments to your Union for having understood it so well."

Twenty-four new locals were chartered during the year. A service flax containing 4,328 stars, presented to the International Union by the Scranton local, was dedicated during the day.

Proof That

ADVERTISING

Lowers Selling Cost

Some new facts and figures throw a flood of light on this subject

The rising cost of living is the great universal hardship of the present day. So great and so many have these rises been that few people stop to realize that there have been any exceptions to the general rule. But the fact is that there have been numerous exceptions and all of these exceptions belong to the same great class—that of nationally advertised goods.

The present agitation on the high cost of living has led to some investigations which have brought out a lot of facts hitherto unknown to the public Some of the most important work in this line is being done by the Association of National Advertisers, an organization of 260 of the leading advertisers of the country. Mr. Sullivan, the secretary-treasurer of the association, has given out some vitally important facts concerning the relation of advertising to selling costs.

"The old idea," said Mr. Sullivan, "that the cost of advertising raises prices, dies hard. But the business man knows better. He knows that selling goods is costly business—no matter what the goods or what the selling methods. And he knows that anything which creates demand on a large scale, and thus makes selling easier, is bound to reduce selling costs and thus helps to reduce prices.

"But the evidence is better than argument; facts are better than theories, and we have been at great pains to collect the facts. We have secured an immense amount of data from our members which proves that advertising does reduce selling costs and thus tends to reduce the selling price of advertised goods. Let me quote a few examples:

"The makers of a famous photographic camera, when they began advertising twentyeight years ago, made one camera which took a 2 1-2 inch picture, and which sold at \$25. Today they make a far better camera which sells for \$10. Another, which took a 4x5 picture, sold for \$60. Today they sell a far better one for \$20. And so on through the line.

"A prominent hat manufacturer has, by means of advertising, reduced his selling cost seven cents per hat. Result—the buyer gets a hat of better quality at no increase in price; this despite increased cost of raw material and

"When the manufacturer of a famous breakfast food specialty began advertising, his goods sold at 15 cents a package. Today the package is fifty per cent, larger and the price has been reduced to 10 cents. Again advertising did it, the same causes producing the same results.

"The producer of another well known food pecialty is selling his goods at 25 per cent. less to the wholesale grocery trade than four years

"Twenty years ago a nationally advertised shaving stick was sold in a cheap metal leather-ette covered box. Today a stick containing 20 per cent. more soap is sold in a handsome nickel ox at the same price.

"Then take the most conspicuous example of m all—the automobile business; and compare the \$5,000, or \$10,000 cars of ten years ago with the equally good cars of today, selling for a frac-tion of the money.

"And so on through a long list. In every case, the manufacturer either has been able to ower the price or improve the quality at no increase in price."

How has he done it? By means of advertising, which has created demand on a larger scale, and thus permitted production and distribution on a large scale. Result—improved manufacturing efficiency and reduced costs. And all of this in the face of a steady increase in the cost of labor and raw materials which, with advertising eliminated, might in many cases have doubled the price of the goods.

"A triumph of economical marketing" is the only possible verdict for advertising in the face of these acts.
