

Rexall Dyspepsia Tablets

TRADE NAME

For all forms of dyspepsia there are no finer remedies than pepsin and bismuth, a statement which your doctor will readily confirm.

These are the two principal ingredients used in Rexall Dyspepsia Tablets and, in conjunction with the other ingredients, make this one of the finest known preparations for indigestion.

Rexall Dyspepsia Tablets soothe and tone up the stomach, causing a healthy and natural secretion of the gastric juices, thus helping the bowels to do their work naturally.

They prevent heartburn, flatulence and distress after eating, and convert the food into rich red blood, flesh, bone and muscle.

The Rexall Store
J. W. McLAREN

Watford - - - Ontario

In convenient boxes, 3 sizes: 25c., 50c., \$1.00. Sold only at the over 7000 Rexall Stores, the World's greatest Drug Stores.

We personally guarantee that Rexall Dyspepsia Tablets will help you. If they don't, we will give you back your money.

Children Farmers Grow in Number

The education of children throughout Ontario in the rudiments of successful farming and market gardening has awakened great interest in agricultural communities during the year. The large attendances at rural school fairs, held under the department of agriculture, this fall, and the demand for more of them next year indicate the interest being roused in the young people. This school movement has grown rapidly in the last three years. The number of fairs held has increased from 25 to 148, and 1391 schools were interested. The attendance at those for the year totaled 95,310. They are held under the management of local organizations of boys and girls, and under the general supervision of the district representative of the Ontario Department. Plots of ground are cultivated and poultry and cattle raised by the youngsters are shown. The work will be extended next year.

A Sheep Bulletin

Pamphlet No. 8 of the Sheep and Goat Division of the Live Stock Branch is entitled "Care of the Ram and Ewes during the Breeding Season." It has been prepared by T. Reg. Arkell, B. S. A., Chief of the Division, and Norman Stansfield. This is an illustrated pamphlet of 16 pages and deals with the subject under discussion in a comprehensive and logical manner. It embodies the instructions of a practical shepherd to those who would improve and increase their flocks. The concluding page is devoted to a number of "Don'ts", outlining a number of practices to be avoided in sheep raising. Copies of this pamphlet may be obtained by making application to The Publications Branch, Department of Agriculture, Ottawa.

Recognized as the leading specific for the destruction of worms, Mother Graves' Worm Exterminator has proved a boon to suffering children everywhere. It seldom fails.

All Around The Farm

FOR POULTRY BREEDING.

European War Offers Great Opportunity, Says Expert.

That the European war offers great opportunity for American poultry breeders to extend the scope of their business is the opinion of T. E. Quisenberry, director of the Missouri state poultry experiment station, who says: "There is no reason for good poultrymen to be alarmed because of the present situation which we are facing on account of the European war or the high price of feeds. The man who has a good laying strain of pure bred poultry is going to get enough eggs this winter to pay his feed and labor bills and net him a nice profit. Neither will

FLOCK OF BUFF BUCKS.

the man who has a good strain of pure bred exhibition poultry suffer, because good breeding stock and eggs in 1915 are going to be scarce and high. We believe that eggs will be higher this winter than ever before. So the good poultryman need not be alarmed. On the other hand, we believe this is really the poultryman's opportunity. But the fellow who will suffer is the man who has scrub poultry that has been bred neither for eggs nor exhibition.

"When times get hard or the price of other food products advance, as is shown by the past history of the industry, thousands of shop men, clerks, mechanics and laboring men in cities and small towns turn to poultry as a side line to help pay the 'high cost of living.' It is certain to be so again. However, because of this uneasiness, there is great danger of many fine flocks, which it has taken years to breed and perfect, being sacrificed this fall and winter. This war is causing feed to advance in price, but it will also cause eggs, poultry and practically all other food products to advance in proportion. The question with you ought to be how to get the egg. There will be a great demand next season for eggs and stock for breeding purposes. Our advice is not to decrease your flock in size so that your business will be crippled this winter or next season."

Feeding Alfalfa to Horses.
Alfalfa is a splendid horse feed, but must be fed with judgment and care. Because of its palatability mature horses are likely to eat too much alfalfa if permitted to have free access to it.

The average farm horse at hard work is allowed to eat much more alfalfa and other roughage than he really needs to maintain his weight. One pound of alfalfa or other hay and about one and one-quarter pounds of grain per day for each 100 pounds of the horse's weight make a good ration for the working horse.

Horses like alfalfa stems. Refuse from the cattle racks is very acceptable to horses. Feed mature horses first and second cutting alfalfa, which is free from mold and dust. Never feed wet alfalfa hay to horses. A sudden change of feed deranges the horse's digestive system. Horses accustomed to alfalfa as a regular part of their ration are seldom troubled from its use.—Extension Bulletin 28, Nebraska Experiment Station.

FALL GARDEN WORK.

It is usually safe to leave sweet potatoes in the ground until the vines are killed by frost, but they should be dug as soon after that as possible. If they are to be stored the tubers should lie in the sun a few hours to dry off before they are picked up. They should be handled carefully at all stages to prevent bruising.

Look at the winter blooming bulbs which are put away in November to root. They may need water, and they should be in the dark and in a cool

place. In a cold frame outdoors is an ideal place for them.

The land that was plowed in the fall for next year's garden will be up better than that that must be plowed in the spring.

Time spent in cleaning up an orchard in the fall of the year will be amply rewarded with better and cleaner fruit the next season.

As soon as the leaves fall and a few sharp freezes ripen the new wood we may commence to prune fruit and shade trees.

Use the larger limbs pruned from the orchard for wood, the smaller ones as a plug to stop that wash in the field or meadow.

Grounding Wires For Stock.
Grounding fence wires affords considerable protection from lightning and is a worth while investment for farmers, according to Frank M. White of the College of Agriculture, University of Wisconsin.

To secure the best results ground wires ought to be placed about 100 feet apart and closely stapled to the post, so as to form a contact with every one of the fence wires. The ground wires should also extend slightly above the fencepost, and, like a lightning rod, should penetrate the soil far enough to reach moist earth. No. 8 or 9 wire has been found most satisfactory for this purpose.

Children Cry FOR FLETCHER'S CASTORIA

Jonah's Wonderful Strength.
The Sunday school teacher was making a review of the lessons.

"Who was the wisest man, James?"

"Solomon."

"That's right. Now, Frank, who was the strongest man?"

"Jonah."

"Wrong. But what reason have you for believing Jonah was the strongest man?"

"Cause the whale couldn't hold him after it got him down."—London Standard.

Lime In Building.

The use of lime as binding material for mortar originated in the remote past. It is probable that some savages when using limestone rocks to confine their fire noticed that the stones were changed by the action of the heat. A passing shower may have slaked the lime to a paste, and they discovered that the paste was smooth and sticky, and was a better material than clay, to fill the crevices in their crude dwellings. From this discovery it was but a step to add sand to the paste in order to produce a mortar.

Complementary Agitators.

Both John Bright and Richard Cobden, colleagues and collaborators in the successful action against the corn laws, knew what they wanted and asked for it, but with a difference.

Bright's eloquence, as his latest biographer, Mr. George Macaulay Trevelyan, impressively shows, was eager and pugnacious. Cobden's expositions were "as passionless as a proposition of Euclid."

Bright himself told how neatly the two styles dovetailed when they were stumping together. After Cobden had made his lucid economic argument: "I used to get up," Bright said, "and do a little prizefighting."—Youth's Companion.

A Medical Need Supplied.—When a medicine is found that not only acts upon the stomach, but is so composed that certain ingredients of it pass unaltered through the stomach to find action in the bowels, then there is available a purgative and a cleanser of great effectiveness. Parmelee's Vegetable Pills are of this character and are the best of all pills. During the years that they have been in use they have established themselves as no other pill has done.

Cornstalks and Snow.

It is sometimes a good plan to leave some of the cornstalks standing. Every fourth row left standing will hold a lot of snow on the land. At the North Dakota experiment station it was found that one-fourth of the cornstalks left standing stopped about as much snow as when all were left.

This will in many cases mean a good deal to the next crop. The added moisture will make the soil less liable to blow, and the standing stalks will check the wind a good deal, near the surface, and this also reduces the drifting. Better try leaving a few rows and see if it does not pay.—North Dakota Bulletin.

Miller's Worm Powders are a prompt relief from the attacks of worms in children. They are powerful in their action and, while leaving nothing to be desired as a worm expellant, have an invigorating effect upon the youthful system, remedying fever, biliousness, loss of appetite, sleeplessness, and other ailments that follow disorders caused by worms in the stomach and bowels.
