Wampole's Extract Cod Liver Oil

This preparation has an agreeable taste, will not cause unpleasant digestive disturbance, can be given without fear of upsetting the most sensitive stomach and can be readily taken by the most fastidious.

It is a splendid tonic and tissue builder and we thoroughly recommend it for those recovering from severe coids or fiu,

D. F. Kirkland, Phm. B. Druggist

Woman Found Treasure Trove.

Buried treasure has been found in France by a New York woman. She is said to be the first person to discover important burled treasure in France since the war. When spading in the region of the devastated town of Hat-ton Chattel, which she is rebuilding, she turned up a pot containing 400 pare coins. Many of the coins in the pot dated before the discovery of America, most of them being from the Fourteenth and Fifteenth centuries. ne of them bear the effigy of the cake of Lorraine, who defended northen France before the Swedish invasion in the Fourteenth century. All buried treasure belongs to the govern-ment, but the finder in this case will be given 10 per cent of its value, which it is understood she will donate to the Metropolitan museum of New York. The discovery is the most valuable find of its kind recorded in

More Light With Less Current. The old subject of keeping electric lamps and reflectors clean is again brought to our attention by Ward Harrison and J. R. Colville, in a recent issue of Electrical Review and Industrial Engineer. Among the Items discussed by these authorities are the extent and causes of lighting depreciation, value of light wasted, and systematic maintenance. Experience has shown that in many factories more than 30 per cent of the light paid for is allowed to go to waste. One-half to two-thirds is being thrown away through lack of attention to simple maintenance requirements. In a plant where the entire time of one man is required the cost of cleaning open reflectors should not exceed 3 cents

Facts and the Rainmaker.

M. Angot, director of the French neteorological office, has demonstrated that even in the extreme case of two equal masses of saturated air, one at 0 degrees C. and the other 20 degrees C., in order to produce a .04-inch fall of rain it would be necessary for the two masses to mix rapidly and thoroughly throughout an atmospheric layer of four miles in thickness; that dust parand ions (the nuclei of rainare not sufficient of themselver cause precipitation without an acompanying reduction of temperature The chance of man-made explosions ausing rainfall is thus seen to be exremely small .- Scientific American.

The insulintreatment for diabetes has been administered to the first patients in Victoria Hospital, London, but as yet the physicians in charge of the cases are unable to state what results have been secured. Applications for treatment have been received from sufferers in all parts of Western Ontario.

This is a trying time for fall wheat.

For French Children

Child welfare agencies of France have been combined into one loose organization known as the general child welfare bureau. The work of the or-ganization is divided into sections; that on school hygiene has studied medical inspection of school children and the question of school nurses; the section on assistance has collected information on all agencies giving ald to children; a section on publicity is carrying on a general campaign of education through lectures, newspaper articles and pamphlets in favor of child

COCKSHUTT DISC HARROWS

If you appreciate the value of a good seed bedand if you want to make one in the shortest possible time and with a minimum of labor-you'll find the solution of your problem in the purchase of a Cock-shutt Disc Harrow.

The No. 3 Out-throw Harrow is a most efficient implement. Its spring pressure prevents discs from rising in centre and secures uniform discing under all conditions. Has high grade, dust-proof bearings. Forecarriage or pole as desired.

Come in and see this and other types of spring implements or write or telephone for catalogue. JAS. D. BLACK & SON, Dutton AGENT COCKSHUTT QUALITY IMPLEMENTS
