

THE DIPTERA OF BRITISH COLUMBIA.

Second Part.—The Syrphidæ.

BY RAYMOND C. OSBURN, NEW YORK.

(Continued from page 220.)

43. *Sphaerophoria micrura*, Osten Sacken.—Two females from Port Renfrew, one July 6, 1901, the other Aug. 16, 1902. The male was taken at Seattle, Wash., July 15, 1901.
44. *Sphaerophoria sulphuripes* (Thompson).—One male specimen, taken at Glacier, July 20, 1901, belongs here questionably. It lacks the characteristic bunch of yellow pile on the hypopygium of *cylindrica*, but otherwise resembles that species quite closely.
45. *Sphaerophoria melanosa*, Williston.—A single specimen taken by Harvey at Vancouver, May 30, 1903, agrees quite well with Williston's description, except that the cheeks are brownish instead of shining black.
46. *Sphegina infuscata*, Loew.—Not common. Port Renfrew, July 6, 1901. A specimen from Mr. Harvey, Vancouver, April 12, 1902. Taken at Lowe Inlet by Kincaid, June 3 (Coquillett, 1900). The writer has taken the species also at Laggan, Alberta, Aug. 23, 1902. Two other specimens taken by Harvey, one at Vancouver, March 28, 1903, and one at Wellington, I place here provisionally. They are much larger and darker than the typical form, and may be distinct.
47. *Sphegina lobata*, Loew.—Not common. Port Renfrew, July 3, 1901; Glacier, Aug. 20, 1902. These show no difference from Ohio specimens.
48. *Baccha obscuricornis*, Loew.—A single specimen from Port Renfrew, July, 1901; one specimen from Harvey, Vancouver, May 30, 1903. Taken at Lowe Inlet by Kincaid, June 3 (Coquillett, 1900). A single specimen was taken also by the writer at Seattle, July 15, 1901.
49. *Myiolepta bella*, Williston. A single specimen of this fine species taken at Port Renfrew, June 30, 1901.
50. *Volucella facialis*, Williston.—Taken by Harvey at Vancouver, May 17, 1902, and May 30, 1903. The writer has taken the species at Banff, Alberta, July 17, 1902.
