

pathology of the disease he has formulated a treatment which is largely dietetic, and which has proved signally successful.

These small volumes are well written, and, inasmuch as they express the natural views of a thoroughly competent authority, are of unquestioned value.

**THE MATTISON METHOD IN MORPHINISM.**—By J. B. Mattison, M. D., Medical Director Brooklyn Home for Narcotic Inebriates. Price \$1.00. Published for the author by E. B. Treat & Co., New York.

This little monograph is devoted entirely to the discussion of the author's ideas of the treatment of the morphine disease. It takes up the various conditions which are apt to arise in the course of medication and which call for modification of the treatment. In many respects its teachings are at variance with those of other writers—yet inasmuch as it represents the conclusions of a careful observer who has for upwards of thirty years been devoting himself to the care of narcotic habitues it must be accepted as authoritative.
