

"Dr. Goodkin, Eminent English Specialist."

Here we have the story of a quack and a good one; both a good story and a good quack. Those who know quacks will recognize the real thing in the hero of this story. It is worth reading and worth leaving on one's anteroom table so that others may read it.—*Dr. Goodkin, Eminent English Specialist. A Story of a Quack. By E. S. Hanson. With illustrations by F. J. Farrell. Chicago: E. S. Hanson, 440 South Dearborn St. 50c.*

"Gardens and Their Meaning."

We agree with the publishers of this excellent work when they say that it is a practical hand book for those who are teaching gardening to young people. It gives instruction in the fullest detail as to how to select and lay out the ground, how to prepare soil and what to plant and how to plant. The book is scientific but distinctly readable, finely illustrated and with tables conveniently arranged for ready reference and shows among other things not only how to arouse a love for country life, how to educate in elementary agriculture, but how to develop co-operation, initiative and leadership.—*Gardens and Their Meaning. By Dora Williams. Boston, New York, Chicago, London; Ginn and Company, Publishers. \$1.*

Progressive Medicine."

The second number has reached us of Volume XIV., being whole number 54, of this excellent quarterly digest; its province is the advances, discoveries, and improvements in the medical and surgical sciences. The volume under review is excellently illustrated and indexed and contains valuable articles. We look upon "Progressive Medicine" as a most valuable addition to the practitioner's library.—*Progressive Medicine. A quarterly digest of advances, discoveries, and improvements in the Medical and Surgical Sciences. Edited by Hobart Amory Hare, M.D., etc. Assisted by Leighton F. Appleman, M.D., etc. Philadelphia and New York; Lee and Febiger. \$6.00 per annum.*
