PUTTNER'S EMULSION is for sale by all good Druggists at 50cts. per large bottle.

Sleepless Nights

Baird's Balsam of Horehound

A GREAT MEDICINE.

Cod-liver Oil is useful beyond any praise it has ever won, and yet few are willing or can take it in its natural state.

Children like it. It is Cod-liver Oil made more effectual, and combined with the Hypophosphites its strengthening and flesh-forming powers are largely increased.

DR. TAYT'S ASTHMA CURES

THE HOME. THE INFLUENCE OF ALCOHOL ON THE LONGEVITY OF MAN.

Dr. Crothers, of Hartford, who had had long experience in the management of institutions for the inebriate and insane, says that "Intemperance is the active cause of from 15 to 50 per cent of all insanity; from 30 to 80 per cent of all idiocy; from 60 to 90 per cent of all pauperism, and from 50 to 85 per cent of all crime."

Dr. Formed found in the dead house autopsies of the Philadelphia Hospital that in 260 chronic alcoholists nearly 90 per cent had fatty degeneration of the liver, 80 per cent haemorrhage of a dropical state of the brain; the same number an inflamed or degenerated stomach, while not quite one per cent had normal kidneys.

To be convinced of the cause of so much pauperism in the country, we have only to examine the statistics of the liquor traffic in the United States. "According to the report of Internal Revenue Commissioner Mills, for the year 1892, the patrons of the saloons paid \$609,000,000 for whiskey and \$617,258,460 for beer, a total of \$1,226,258,460 the interest of which for one minute at 6 per cent per annum is \$3,515,087. This would more than pay off the national debt, and procure food and clothe all the poor of the country."

When we look abroad over the world and take a bird's eye view of the evil effects of intemperance in its various aspects, its production of crime, death, the destruction of happiness and home, pauperism and crimes innumerable, with general demoralization, we are astonished that any thinking man, much less a physician, should not see the connection between the drinking man and drunkards enjoy greater longevity than total abstainers.—The Medical Progress, April, 1895.

ROSE FERNERIES.

The late fall, after the days of Indian summer have softened the earth and the ferns and flowers have prepared for their winter's sleep under the snow, is the best time to collect woodlands treasures for a fernery.

ADDING A PLANT-ROOM TO THE HOUSE.

If it were understood how easily, and at how little expense, a plant-room can be added to an ordinary house, there would certainly be more of these useful and pleasure-giving adjuncts to country and suburban homes.

THE COMMON PEOPLE.

As Abraham Lincoln called them, do not care to argue about their ailments. What they want is a medicine that will cure them. The simple, honest statement, "I know that Fowler's Sarsaparilla cured me," is the best argument in favor of this medicine, and this is what many thousands voluntarily say.

BATHING THE SCALP.

Though most hairdressers insist that the scalp should not be bathed oftener than once a month, it is very important that it should not be neglected. It is far better to err in washing the scalp too often than to wholly neglect it, as women with long hair are tempted to do because of the difficulty of drying it. The best materials for washing the scalp are white castile soap and warm water, softened with a tablespoonful of ammonia and a teaspoonful of borax to every quart. Scrub

thoroughly with the tips of the fingers, applying castile soap and warm water, ammonia and borax to the scalp, but keeping it off the hair as much as possible unless the hair is unnaturally oily, when soap will do it no harm. Wash the hair only sufficiently to remove the dust from it. Rinse the soap and hair in warm water, softened with ammonia if the water is hard, and continue to rinse the scalp and hair until the water is cloudy or milky in effect, but is perfectly clear. Dry the hair as quickly and thoroughly as possible by wringing it in absorbent cloths a small portion at a time, and by fanning a small part at a time before a fire. In this way long hair may be quickly dried. If the individual is liable to take cold easily it may be safer to use a little bay rum on the scalp, but the best hairdressers avoid this, as they believe strong spirits like bay rum and all strong alkali preparations are injurious to the hair, making it dry. Every one agrees that the hair should be clipped or singed off at the ends at least once in two months to prevent the hair splitting at the ends.

MENDING STOCKINGS.

It sometimes happens that the feet of stockings are past darning while the legs are still in perfect condition. Good woolen hosiery, which every one ought to wear for health's sake in cold weather, is expensive, and mothers are often forced to make use of two pairs of stockings legs by cutting one of them over into feet. The best method of doing this is to cut out a heel of a folded piece of the upper part of the leg, and the stocking is generally heavier and the remainder of the foot from the lower part. There must be a seam at the bottom of the heel and one seam the length of the foot over the instep. The foot is sewed to the heel, and the perfect foot with heel is united to the whole leg. There are excellent patterns for this work published at 10 cents. If soft open seams are used and castile soap down to make the feet more pliable, boys and girls for whom this work must be done will hardly notice the difference between regularly made hosiery and these made-over stockings, which cost so much expenditure in a large family.

AN INEXPENSIVE FRUIT CAKE.

The first chill winds of autumn suggest the fruit-cake, laden with fruits and rich with spices, which is so acceptable and, despite all the croaking of dyspeptics, so wholesome for persons of healthy tastes. More persons are attracted by a message spread of simplicity that do not contain enough rich material to support the body in health than were ever injured by well-made fruit cake or fruit puddings. Cream a cup of butter and a cup of sugar, add a single egg, a teaspoonful of vanilla, and a cup of flour, and add two cups of apples chopped fine, two pounds of chopped raisins and one grated nutmeg. Let these ingredients stand three days. Then add a cup of sweet milk, in the autumnal season, the blue hepatitis will lift its blossoms, and the creeping mitchella will open its fragrant white flowers and show its scarlet berries. The sweet arbutus, the "mayflower" of New-England, will bloom in pink and white.

THE FARM. JUST BEFORE WINTER.

DR. GEORGE G. GROFF.

In the Garden—All trash, as dead weeds, leaves, vines, old peabrush—indeed, everything which can possibly harbor insects—should be gathered together and burned. Insects of all kinds, which insects and their eggs are carried over the winter. After cleaning up the garden it should be cultivated or ploughed. This is for two purposes, first, to kill weeds which start in the fall, and second, to cover insects and their larvae which are often just below the surface of the earth, and when exposed after they have gone into winter quarters do not have the time or ability to again protect themselves for cold weather. If the garden is well drained and the soil is not too full of clay, it is benefited by fall ploughing. It should be heavily manured with good stable manure, which the plough will turn under. To those who have never tried it, the use of the subsoil plough in the garden is recommended. Get down two feet if possible. On the Atlantic seaboard, where summer rains are frequent and deep stirring of the soil will render the severest draughts of rain of little moment.

Remove all weeds from among the strawberry plants, and clear the ground of weeds from around the currant and gooseberry bushes. This can never be done so easily as now. Cut the tops off the asparagus plants and burn them. This will kill large numbers of the beetle which infests this vegetable. Bake clean the asparagus bed and burn all trash. In the same way clean off the rhubarb bed. Manure both rhubarb and asparagus heavily with well-rotted stable manure or rich compost. Apply compost and wood ashes to currant and gooseberry bushes. Get a plot of ground ready and manure it well for earliest potatoes, early peas, radishes, spinach, and beets. These can be planted even in March. If the ground becomes dry enough to work.

Do not cover the strawberries, winter lettuce or spinach until the ground has frozen and cold weather is established. Leave the vegetable pits open in the vegetable pits until hard frosts commence. Put the covering on celery gradually.

In the Orchard—Clean up all trash and burn it, as given under "Garden." Do not trim trees now, as the cold enters fresh cut surfaces, often to injury of tree. Remove insect nests and all masses of eggs visible. If borers have not been dug out of peach, plum and other trees, it now rather than later leave them until spring. Trees which seem to be infested with insects should be sprayed with a soap solution, two pounds of white soap to the gallon of water, applied as hot as possible. Wash the trunks of all trees with scaly bark with this same solution. Fertilizers are best applied to the orchard in fall or early winter. Well-rotted stable manure, wood ashes and bonedust are all good, and may be used in any quantity. Young trees in exposed situations should be staked to prevent swaying by winds. Half hardy trees and vines may be laid down and covered with earth, or protected with straw or corn fodder.

About the Buildings.—All yards and corners should be given a thorough cleaning. Loose boards should be fastened, windows tightened and everything put in shape for cold weather. If the barn is open, and cold, feed may be saved and the stock more comfortably by closing cracks and crevices. Water pipes and cisterns should be covered beyond the reach of frost. Secure a lot of dry earth, muck or peat, and store it for winter use in the earth closet. Put troughs in the barn over the manure pits so that it will not leak away all winter. If the stable floors have become uneven and you cannot afford cement floors, fill them in with clay, tamping it in wet when it will last for a long time. If short of building material, gather and store forest leaves, which are excellent for this purpose.

On the Farm.—Do not let the cattle range over the whole farm when the ground is cold and wet. They will do more harm by trampling and solidifying the soil than they will save in feed. If gullies are starting in any of the fields, fill them up with brushwood or even with cornfodder. Build stone dams in places most needed, and in a few years unsightly places may become profitable pastures. Muck and peat may now be gotten out and corded for future use in stable or in compost piles. This is a good season to drain swamps and to lay up a supply of winter's firewood.

Grasses.—There were 3,708,241 acres in pasture in Ontario in 1894 and 3,070,948 acres in hay. The cleared land amounted in all to 12,292,610 acres. It is seen that grasses play a very important part in the agriculture of the Province. The U. S. Government has appointed a specialist in grass culture; he is known as the agronomist. The Ontario Department of Agriculture lately issued a finely-illustrated pamphlet on "The Grasses of Ontario," prepared by Messrs. Hoadley & Day, the Agricultural College. Twenty-five varieties of grasses are described and illustrated. We understand that it is intended to place this in the hands of rural school-teachers next year.

Faded Out.—None but those who have become fagged out, know what a depressed, miserable feeling it is. All strength is gone, and despondency has taken hold of the sufferers. There, however, is a cure—one box of Farme's Vegetable Pills will do wonders in restoring health and strength. Mandrake and Dandelion are two of the articles entering into the composition of Farme's Pills.

THE COUGHING and wheezing of persons troubled with bronchitis or the asthma is excessively harassing to themselves, and annoying to others. Dr. Thomas' Electric Oil obviates all this entirely, safely and speedily, and is a benign remedy for lameness, sores, injuries, piles, kidney and spinal troubles.

EVERYBODY SHOULD Have it in the House STRICTLY FOR FAMILY USE.

It soothes every ache, every lameness, every pain, every soreness everywhere, whether internal or external, and in nine cases in ten speedily relieves and cures. Our good old Johnson's Anodyne Liniment was originated and first used by the late Dr. A. Johnson, an old-fashioned, noble-hearted Family Physician, to cure all ailments that are the result of irritation and inflammation, such as colds, croup, coughs, catarrh, colic, cramps, chilblains.

Johnson's Anodyne Liniment

Its special province is the treatment of inflammation. Its electric energy everlastingly eradicates inflammation without irritation. It is important everyone should understand the nature and treatment of inflammation. Send us at once your name and address and we will send you free our new illustrated book, "TREATMENT FOR INFLAMMATION." This book is a very complete treatise in plain language, which every person should have for ready reference.

The Doctor's Signature and directions are on every bottle. If you can't get it send us. Price 25 cents. Sold by Druggists. Pamphlet free. I. S. JOHNSON & CO., 23 Custom House St., Boston, Mass., Sole Proprietors.

Well Dressed Ladies

Now-a-days have their Skirts bound with

W. men are usually anxious to make their money go as far as they can hence the great popularity of the Corticelli Skirt Protector. It is economical and adds to the beauty of a garment as well. Sold in 4 and 6 yard lengths. The MOHAIR is in 5 yard lengths. Can be had in same shades as CORTICELLI SEWING SILK.

Corticelli Silk Co., Manufacturers, St. Johns, Que.

A GRATEFUL LETTER.

A Prince Edward Island Lady Speaks For the Benefit of Her Sex. Had no Appetite, was Pale and Easily Exhausted. Subject to Severe Spasms of Distress and Other Distressing Symptoms. TRENTHAM, P. E. I., May 9th, 1895. To the Editor of L'Impartial:

DEAR SIR,—I see by your paper the names of many who have been benefited by the use of Dr. Williams' Pink Pills. I feel that I ought to let my case be known as I am sure that many women might be benefited as I have been. For a number of years I have been almost an invalid. I did not know the nature of my malady. I had a tired feeling, being exhausted at all good food, I had no appetite and was very pale. I sometimes felt like lying down never to rise. A distress would sometimes take me during me to drop where I would be. During these

spells of dizziness I had a roaring sound in my head. I took medical treatment but found no relief. My husband and father both drew my attention to the being material which appeared from time to time in your paper concerning the cures wrought by Dr. Williams' Pink Pills. At first I had no faith in them, in fact I had lost faith in all medicine and was resigned to my lot, thinking that my days were numbered in this world. Finally, however, I consented to try the Pink Pills. I had not taken them long before I felt an improvement and hope revived. I ordered more and continued taking the pills for three months and I must say that to-day I am as well and strong as ever and the many ailments which I had are completely cured. I attribute my complete recovery to the Dr. Williams' Pink Pills and hope by telling you this that others may be benefited by them. MRS. WILLIAM PERKY.

After reading the above letter we sent a reporter to interview Mrs. Perry and she reported that she had already stated in her letter. Her husband, William Perry, said her father, Mr. J. H. Lander, J. P. and fishery warden, corroborated her statements.—Ed. L'Impartial.

Dr. Williams' Pink Pills for Pale People make pure, rich blood, restore shattered nerves and drive out disease. They cure when other medicines fail and are beyond all question the greatest life-saving medicine ever discovered. Sold by all dealers, but only in boxes the wrapper around which bears the full trade mark "Dr. Williams' Pink Pills for Pale People." Pills offered in loose form, by the hundred or ounce, are imitations and should be avoided, as they are worthless and perhaps dangerous.

When you wish to please the children, have a soap bubble party. The finest that is recommended as producing best results is made from an ounce of white castile soap cut into small pieces and boiled three or four minutes in three-pounds of a pint of water. When the liquid is cool, add three-fourths of an ounce of glycerin. Make this preparation the day before your party and put it in a tightly corked bottle. The bubbles made in this way are very brilliant. A long table covered with an old blanket is a very good place for showing off the bubbles. Clay pipes should be used. They should be new for the best results and are very cheap if bought by the dozen.
