BURNELL'S

FOUR-POINTED GALVANIZED STEEL BARB WIRE FENCING.

There are now before the public a number of Four-Pointed Barbs, which to the casual observer, are similar in appearance to the Burnell Barb which we are making, but a close examination of them will show the difference and their inferiority.

The Grand Trunk Railway Company of Canada give it a preference over all others, and have contracted with us for over one hundred tons of fencing for immediate delivery.

This Barb was patented in the United States in 1877, and is no infringement on any other patent, and we will defend our rights. We claim superiority for our Barb Wire over all others for the following reasons:

1st.—We use only the best quality of Galvanized Annealed Steel Wire.

2nd.—The two strands of No. 12 Wire are twisted together just enough to allow for the contraction and expansion of the metal, caused by heat and cold, and not so much as to injure the structure of the wire.

3rd.—The barbs on our wire are four-pointed, thus always presenting a barb laterally or a right angle, which is a great advantage over the Two-Point Barbs, as cattle are unable to get against the fence to break it or push it down.

4th.—The barbs are fastened to the wire at intervals of 7 inches, in a manner entirely different from any other, being secured by a wire and not by a nail, so that they cannot slip or move toward each other, and they also prevent the untwisting of the wire should either wire get broken.

5th.—The barbs are put on by machinery, and are so perfect that the wire is not injured or weakened by the process, as is the case with other Four-Pointed Barb Wire.

Manufactured by the CANADA WIRE COMPANY, Montreal.

H. R. IVES, Manager
