Being unable to procure samples of this coal, which is justly considered one of the best of the Cape Breton coals, the following analysis, by an unknown authority, is given:—

Volatile matter	33.21
Fixed carbon	63.94
Ash	2.85
	100.00

This coal is more particularly used for gas making, its yield for this purpose being 9,500 cubic feet of 15 candle gas per ton, and a good coke.
