The Last Word in Optical Science Fines Expression

At Epstein's

All that modern skill can give in ability and equipment for testing the human eye for glasses that are mathematically correct has been given at considerable outlay, by K. W. Epstein & Co., whose practice is now confined entirely to their fine new optical parlor in the Dufferin Hotel Building, on the South Side of King Square, which ranks among the most complete establishments of its kind in the maritime provinces. Only qualified optometrists of wide experience are employed, and eye-sufferers may be assured of a highly specialized optical service when they entrust their cases to K. W. Epstein & Co., 4 King Square, South Side, Dufferin Hotel Building. 6-25

Dr. Burden then explained the objects of such a clinic as follows:

To make it possible for every child to have skilful dental service.

To educate the public and children through a system of lectures and newspaper articles, and in this way to bring to them the message which the dental profession has been trained to give, showing the scientific facts which through a long period of research and investigation have now been proven to be practical and essential to public health.

To make a dental survey of all school children.

To treat without charge all children whose parents or guardians are unable to pay for private attendance or service.

## MONCTON DENTISTS OFFER FREE CLINIC

For Benefit of Children of Schools—Seven Out of Ten May Need Treatment.

(Moncton Transcript.)

Asking for space, light, heat and janitor service only, a delegation from the Moncton Dental Society presented to the Board of School Trustees at their meeting Thursday evening, an offer to work on the teeth of the children of Moncton and to do so gratis to those whose parents could not afford to pay for the work done. The school board, realizing the importance of the decision which they would make, decided to leave the matter over for a special meeting.

The board heard the delegation, consisting of Drs. H. W. Bird, W. L. Gillespie and Fred E. Burden.

Dr. H. W. Bird explained that the proposal which the dentists were making had been made some years ago but had not been adopted. A dental clinic exists in all large cities both for the public schools and large manufacturing concerns. He regretted that the board could not hear from Dr. Cormier, the other member of the delegation, who was unable to be present at the meeting, owing to illness.

Dr. W. L. Gillespie said that light, heat, space and janitor service, in addition to moral support, was practically all that the society was asking of the board. As there are some 8,500 school children, it would be necessary to have one school room, four chairs, about four tables, four cuspidors, one chair for extracting in a comparatively sound-proof room. There would be needed, in addition, a master, water service and there should be also a shower bath provided.

Dr. Gillespie said that the society believed that it can secure the equipment from public subscription or rather from the various societies and clubs.

Already support has been promised. The nurses have offered a chair and various clubs stand ready to help. Dr. Gillespie believes that between \$1,000 and \$2,000 will cover the original outlay.

Dr. Burden went into the proposed clinic in some detail. Every dentist in the city, he said, was willing to give an hour of his time each day. The need is apparent, Dr. Burden said, and went on to emphasize the importance of having the children's teeth put in shape.

Among other things, it means quicker advancement in their work and thus a less charge on the public. Dr. Burden said that they were all citizens together and were interested in the welfare of the children of the public schools. The inauguration of a dental clinic would be another step ahead for our already excellent public schools. He believed that while the idea of a dental clinic was by no means original, he had never heard of all the dentists in any city uniting together to give part of their time towards such a proposal. In that way, then, Moncton would lead.

Dr. Burden then explained the objects of such a clinic as follows:

To make it possible for every child to have skilful dental service.

To educate the public and children through a system of lectures and newspaper articles, and in this way to bring to them the message which the dental profession has been trained to give, showing the scientific facts which through a long period of research and investigation have now been proven to be practical and essential to public health.

To make a dental survey of all school children.

To treat without charge all children whose parents or guardians are unable to pay for private attendance or service.

To permit the organized and trained doctors of dental surgery to give this service to the City of Moncton without financial remuneration.

Dr. Burden suggested that the Board of School Trustees provide a suitable infirmary and give janitor service, heat and also appoint two members to act on the administration board, one of these to act as president. Two members of this board should be appointed by the Moncton Dental Society; two from the Child's Welfare Association; one from the Victoria Order of Nurses and one from the Board of Trade; one from the Rotary Club, and one from the Canadian Club.

He also suggested that the governing board appoint the members of the Moncton Dental Society as a working staff and will receive all contributions from the various sources, which will be used to maintain the services.

Three members of the staff shall be in attendance during the hours which shall be laid down in a programme for the purpose of examining and treating the children.

The record cards will be handed, first, to the chief dental surgeon, and after a proper record being made in his office, the cards will be passed on to the teacher.

The card will be provided with a detachable stub which the teacher will hold, and the card will then be given to the child to take home to the parent or the guardian. The parent or guardian will then learn the condition which will be plainly written out for their information and they will be requested to have any necessary dental defects attended to.

If the parent or guardian should find himself unable to meet the expense they will approve same and return to the teacher. The teacher will immediately forward the card to the investigation committee of the board of governors, upon whom is recommended the chief dental surgeon will have the child treated by the clinic without charge. In cases where the parent or guardian should prefer to have the child attended to by their family dentist, the card shall be signed by the dentist after the treatment is completed, and returned to the teacher.

The teacher shall then forward the card to the chief dental surgeon, and the parent has the privilege of again having the child examined to ascertain if the treatment is complete and satisfactory.

It will be impossible by this card system for the children to know which of them are receiving free treatment.

Dr. Burden recommended that all children, after treatment, should be examined by the attending staff, as this will encourage a better dental service and prevent error in treatment, which if left to one man may greatly injure the future dental apparatus and health of the child.

He said that it is anticipated that a refusal to have the child treated, or refusal to have the child treated, will allow a child to be neglected, and from a standpoint of class progress, the untreated child will lose much time on account of lack of concentration to the school work, and, therefore, cost the city considerable money. He also spoke of the great danger of allowing a child with an infected tooth to mingle with other children on account of the almost certain spread of such a child will spread.

The dentists will be able to examine every child in the schools of the city twice during the year and it is estimated that they can do so for those who require it, about 5,000 fillings, and attend to the emergency treatment such as temporary fillings, etc.

He said that it is estimated that the survey will show seven out of every ten children in the Moncton schools to be in need of dental services. It has been definitely proven that a group of children properly treated made fifty-seven per cent. advance over a group who were left untreated. Both of these groups had been about equal in moral, physical, mental and disciplinary tests, on three occasions when tests were made before beginning the experiment. Wrapped in cleanly parchment paper, with a little spoon, a like portion for each person, Purity Ice Cream Bricklets are ideal for picnics, receptions, dessert, and for kiddies.

Ask your Purity dealer for Purity Ice Cream Bricklets once, then you'll always want them.

## PRIZES FOR EFFICIENCY.

National Lumber Manufacturers' Association to Award \$2,000 for Discoveries.

Washington, June 24—Encouraged by the response to its prize offer last year,

the National Lumber Manufacturers' Association has decided to offer \$2,000 in prizes this year for the discovery of new methods, new machines, or new devices in the lumber industry. Last year's prize of \$1,000 was in a single award, but this year the \$2,000 will be divided into a first prize of \$1,000, a second prize of \$500, three \$100 and four \$50 prizes. The National Lumber Manufacturers' Association believes that widening the prize distribution so that nine contestants "will be in the money," will lead to the reception of a large number of suggestions.

The competition is open to anyone, in or out of the industry. Practically, the only conditions are that entries for the competition must be made before the time of the next national convention of the association, which will probably be held in April, 1923, and that any suggestion offered must relate to a new method, new machine or new device, which, in practical application or use, will result in an appreciable saving of labor, time, material or expense, when applied to present manufacturing.

## International in the Packing Motor Trucks Industry

ANYBODY who knows the packers of Canada will agree with the statement that they are careful buyers. They are noted for their ability to get full value for every dollar.

Perhaps that is one reason why International Motor Trucks are at work for the leading packing companies of the Dominion.

One of the trucks in service for John Duff & Son of Hamilton, makes country trips almost daily, over roads that frequently become well-nigh impassable. Yet the truck has cost its owners very little for upkeep.

Sturdy strength that endures is the result of years of manufacturing experience and is backed by regular inspection by International road engineers who call on International Motor Truck owners as long as the truck is in use.

An International Motor Truck will cut your hauling costs. Give us an opportunity to show you how. Write for Catalog No. 2.
