

CORES

Mineral Lands worth millions have been developed on the evidence furnished by diamond drill cores. The same testimony has saved millions by proving other deposits valueless.

Since 1884

Sullivan Core Drilling Service

has been noted among mineral land owners, mine operators, and mining engineers for its completeness and absolute dependability. The accuracy of its records have caused them to be accepted in hundreds of instances as final proof of the mineral value of lands or the location and nature of orebodies tested by this means.

If you have mining property to be tested, let us explore it for you. Modern prospecting equipment and skillful operators always ready. Ask for Booklet 6113. The cut shows cores 2 in. in diameter from a 1500-ft. bore hole drilled by us in Virginia.
