But the outlay will be completing at trifling cost such an im- very insignificant when compared with portant improvement as the Le Roi, the immense benefits that will thereby accrue to the Province.

What is needed in the first place is an appropriation by the legislature for a

substantial building and the salaries of an able geologist and metallurgist and an assistant or two. There need not be any expense to the Province for lecturers for some time to come, as there are already in Rossland at least a dozen scientists, who are well qualified to be professors in the best mining schools, and who would gladly lend their services from time to time. This feature alone should be sufficient inducement to

With the growth of the institution the enrollment of pupils would be greatly increased. Then the government could well afford to establish a large staff of instructors in the several sciences associated with mining. In time, owing to the exceptional facilities for studying geology and metallurgy here, the school can be made one of the eading institutions of its kind. It is satisfactory to note that the citizens of Rossland are alive to the importance of this matter, and THE MINER hopes that they will not overlook any opportunity to accomplish what they have started out to perform. The incorporation of the Rossland School of Mines under the Societies Act is a move in the right direction, for it places this city ahead of any possible rival. The next thing to be done is to win the substantial support of the legislature. This is all important and deserves very careful

(Editorial concluded from Page 4.)
