

The Natural Cure For Rheumatism

"Fruit-a-tives" remove from the blood the poison which causes Rheumatism.

Rheumatism means poisoned blood. The kidneys, bowels and skin should rid the system of waste matter. If either of these vital organs become weakened or diseased, the body cannot throw off this waste fast enough.

One of these body poisons is UREA, which is eliminated both by the kidneys and skin. If the skin action is poor—if the kidneys are inflamed—urea stays in the system— is changed into uric acid— carried by the blood to the nerves and joints—and causes Rheumatism.

"Fruit-a-tives" cure Rheumatism because they eliminate urea, by increasing the action of bowels, kidneys and skin. This is the only possible way in which Rheumatism can be cured to stay cured. And "Fruit-a-tives" is the only remedy in the world that completely eradicates the disease from the system.

"Fruit-a-tives" are fruit juices in which the natural medicinal action of fruit is many times increased by the process of combining them.

Then tonics and antiseptics are added and the whole made into tablets, six a box—4 for 25c. At all dealers or from Fruit-a-tives Limited, Ottawa.

"Fruit-a-tives" will cure almost any case of Rheumatism, Sciatica, Neuralgia.

PUZZLE CORNER

START A POSTAL CLUB.

Dear Puzzle Editor—

I am in the eighth grade at school and I like algebra, literature and history best of all my studies. I am very fond of books.

We have great fun at school playing ball, now that the fine weather has come again. Sometimes on fine summer days we girls go picnicking and we have fine times.

Perhaps some of the Puzzle Corner girls and boys would like to exchange postals. I would be glad to exchange with any of them. I am collecting them and have about 130 now.

Wishing this column much success.

I remain,
Your little friend,
HELEN VOLBORG GILLIAT.

Dear Puzzle Editor—

I am a little boy ten years old. I go to school and like to study. I am interested in the Puzzle Corner and or I am glad you take an interest in us children. It helps us to look for the coming of the paper. I like to try and puzzle them out myself but have to get help sometimes. I am sending answers to puzzles, hope they are right. I wrote this myself.

AVARD E. WITHERS.

Dear Puzzle Editor—

I am ten years of age and go to school at Paradise West and am in the 7th grade. I like going to school and also like farming, especially taking care of stock. I am glad it is coming summer after such a long cold winter.

Yours truly,
H. HARDING MORSE.

I. AN AGE PROBLEM

When first the marriage knot was tied
Between my wife and me,
My age was to that of my bride
As three times three to three.
But now, when ten and half ten years
We man and wife have been,
Her age to mine exactly bears
As eight is to sixteen.
Now tell, I pray, from what I've said,
What were our ages when we wed?
BESSIE YOUNG.

II. ENIGMA.

I am composed of nine letters,
My first is in joy but not in pleasure.
My second is in work but not in leisure.
My third is in school but not in play.
My fourth is in year but not in day.
My fifth is in pen but not in ink.
My sixth is in white but not in pink.
My seventh is in noise but not in laugh.
My eighth is in grain but not in chaff.
My ninth is in wine but not in gin.
My whole is a girl's name.

GRACE.

III. CONUNDRUMS.

1. Of what trade is the sun?
2. Why is the grass you walk on older than yourself?
3. What is that which is bought by the yard and worn by the feet?
4. Which is heavier a half or full moon?
5. When does a man weigh twenty hundred pounds?
6. Can you spell mouse trap with three letters?
7. When is a sailor not a sailor?
8. Why is a stick of candy like a race horse?

GRACE.

MILFORD CORNER.

Mrs. Everett Morgan, of Alston Mass., is visiting Mrs. Frank Alcorn. Mrs. Lent, of Deep Brook, is visiting her daughter, Mrs. Albert Robins, and on Thursday a number of friends spent the day there.

Mrs. Wesley Rosenkrantz went Digby last week for the summer.

Mr. and Mrs. William Thomas and Mr. and Mrs. Beuten Akorn drove Smith's Cove on Monday evening to attend the entertainment given by the K. O. T. M. Comedy Company. Very pleasant evening was spent.

An entertainment will be given in the school-house here on next Wednesday evening by members of the K. O. T. M. All are cordially invited. Admission free.

Edison Makes a Prediction

New York, June 18.—Thomas A. Edison, the inventor, in the course of an interview, says—

"A scientific discovery which I expect to see before I die, is the direct generation of electricity from coal. This has already been achieved in an experimental way. I have heard of several men who have done it. I myself have generated an electrical current by burning carbon and Chilean saltpetre together in an electricite, although at an expense which made the process a commercial impossibility.

"Imagine what will be the consequences. When locomotives will be thrown onto the scrap heap. All trains will be run by electricity. No longer will coal be laboriously transported to the cities, but there will be great power plants established at the mouths of the mines, from which the electricity will be sent out over the country by wire.

"There will be no horses in the streets, no stables, no flies. Wagons will be propelled by electricity. Houses will be lighted entirely by electricity, for it will be so cheap it can be used by the humblest tenement dwellers.

"Ships will no longer be driven by steam. Electricity will be their motive power, and then it will be possible to cross the Atlantic in three days.

"At the present time nine tenths of the power obtained from coal is lost by the use of boilers, wheels and dynamos. With the direct generation of the electrical current, therefore, the world will have ten times more energy than now."

The Boy Who Would Succeed

Between the stupid, lazy and generally mediocre toilers who seldom get beyond the bottom of any ladder, and those who have taken possession of the top are many planes or rungs, and each is attained chiefly through the personal effort of the fellow who is doing the climbing. As the result, everything depends upon the manner in which each individual starts his struggle for supremacy.

If, for example, the boy who steps out into the world of affairs in a shiftless, careless manner, he has either got to turn over a new leaf before these habits of life become settled upon him, or he might as well make up his mind that he is fated never to amount to anything. If his interests are centred in the pay envelope, and he is constantly exhibiting evidences of his fears of working too hard, his employer soon knows in what general class to place him. If, instead of paying attention to his employer's business, and making all such interests his own, he proves himself to be not only a shirk, but generally incapable of mastering anything beyond the ordinary first rudiments of his trade or profession, it is a foregone conclusion that he will remain around the bottom rungs of the ladder.

To go higher any young man must develop some of the traits that work towards success, and as one by one these traits are developed the ascent gradually becomes easier, the competition grows less and less severe, the opposition to further ascent more easily surmountable, until at last there is a clear sweep ahead. It is, indeed, true that there is lots of room at the top, and there will always be plenty of room there, simply because it requires something more than mere industry to "make this ascent. Any fool can stay at the bottom, but it takes a man with determination, ability, self-confidence, and a dozen other good traits to climb to the top. It is these men who are rare, not the "opportunities." It is lack of ability that keeps men down, not competition. The genius fatigues on competition. It is the inferior workman who starves.

In brief, this is the secret of the success and failure of men. Everything depends upon our individual effort. If your natural inclinations keep you at the bottom of the ladder you will be mighty lucky if you find anybody who is willing to boost you up, but, if, on the other hand, you are made of the right kind of stuff, up, but, if, on the other hand, you are made of the right kind of stuff, you will climb just as far as you can, and you won't worry a bit about over-population or excessive competition.

The Libel Case Adjoined

Fredericton, N. B., June 20.—As a result of the proceedings today in the trial of the King vs. James H. Crockett, managing editor of the Gleaner, the chances of the case going to a jury at the present sessions are regarded as remote. It is generally believed here that there will be an adjournment tomorrow until September, at the earliest, to enable the points raised by the demurrer submitted today by the crown and disallowed by the judge to be argued before the full bench and to give time for the crown to obtain the evidence by a commission of a man named O'Brien, believed to have been one of the porters at St. Lawrence Hall, Montreal, in March, 1906, and now out of the country.

After hearing arguments of counsel on both sides, the judge in giving his decision disallowed the demurrer on the ground that in his plea the defendant used language which technically covered the two elements in issue, to a jury at the present sessions are regarded as remote. It is generally believed here that there will be an adjournment tomorrow until September, at the earliest, to enable the points raised by the demurrer submitted today by the crown and disallowed by the judge to be argued before the full bench and to give time for the crown to obtain the evidence by a commission of a man named O'Brien, believed to have been one of the porters at St. Lawrence Hall, Montreal, in March, 1906, and now out of the country.

PREDICTS GOOD TIMES.

The Montreal Witness looks for another year of "tremendous if not feverish" activities in Canada. There are, it says, two factors in favor of such conditions. We quote—

"The first and more important is the overflowing order books of the large manufacturing firms and of those who supply the raw material for such manufactures. The fact that manufacturers and wholesale houses are busy to the fullest of their capabilities would seem to show that the consumptive power of the people has not in any way diminished, but has rather been accentuated by prosperous years that have passed and by the ever increasing population in every part of the country. As neither the laborer nor the employer has any serious setback, it may be assumed, for a time at least, that the full force of business development will go on its course unimpeded.

"The second is the various satisfactory crop reports that have come from the west during the past week. There has not been an exception in the large number of reports that have come over the wire, many of which are of undoubted authority."

By authority of the new law a suspicious looking package was opened at the station on Friday last by Scott Act Inspector Crowell, and was found to contain a quantity of liquor. The management of the D. A. R. was notified when an order was given that the case be returned to the shippers at Halifax at their expense. This order was carried out and the goods returned by the afternoon train. The package was shipped by Kelley & Glassey and was addressed to Harry W. Taylor, Wolfville. As there is no such person known here suspicion was aroused that all was not straight. A sharp look out will be had for future goods of this kind.—Wolfville Acadian.
