Hudson River." If he had 'hunted' the 'Hill' on which Hudson City stands, instead of the 'salt marsh' at its foot, he might have captured a hundred specimens instead of one. The increase of this insect during the last two years is marvellous.—W. V. Andrews, New York.

LIMENITIS PROSERPINA, Edw.—Mr. J. M. Jones sent us a coloured drawing of a specimen captured near Halifax, Nova Scotia, which we consider to be a specimen of *L. proserpina* Edw. We sent the drawing, however, to Mr. Edwards, the highest authority, who replied as follows:—"I think the figure is of *Proserpina*; the white band is rather unusually broad on the upper surface, but no two of the specimens I have seen are alike in this respect. If you examine a series of *Arthemis* you will notice a large range of variation in all respects, and probably *Proserpina* varies as much."—C. J. S. B.
