ule, in con-  
, 448; be-  
ane of the
- Reseda, the capsules of the genus  
open at top at a very early period,  
363
- Resedaceæ, observations on the order,  
its structure, and affinities, 281—  
285; species found in Central  
Africa, 281; comparison with Cap-  
parideæ and Crucifere, 282; Mr.  
Lindley's hypothesis regarding,  
controverted, 283; structure of  
petals in, 281, 283-4; development  
of flower-bud of *Reseda odorata*, 284
- Restiaceæ, observations on the order  
and on its distribution in Terra  
Australis, 53; hardly exists in the  
interior, 339
- Resupination of corolla in Westringia  
controverted, 39; seed in *Cremolo-  
bus* and *Menonvillea*, 264; of  
ovules in *Euonymus* and *Abelia*,  
448-9
- Rhamneæ, character of the order, and  
observations on its distribution in  
Terra Australis, 26
- Rhizanthæ, objections to the union  
of Rafflesiaceæ and Balanophoreæ  
in the same class, 412—415; Mr.  
Griffith's memoir on the plants re-  
ferred to, 423
- Rhizophoreæ, character of the order  
and observations on its distribution  
in Terra Australis, 20; on the  
species found in the vicinity of the  
Congo, and on the characters of the  
order, 119
- Richard, M. Achille, his idea of the  
structure of an Orchideous flower,  
501, 561
- Ritchie, Mr., plants collected by him  
near Tripoli, &c., 260
- Ross, James, plants collected by him  
in Melville Island, 185
- Ross, Captain John, plants collected  
by the officers of his voyage on the  
coasts of Baffin's Bay, &c., 175
- Roupellia grata, a species of cream  
fruit used by the natives of the  
west coast of Africa, 153
- Rubiaceæ, forms with Apocineæ, As-  
clepiadeæ and certain genera referred  
to Gentianeæ, a great natural class,  
36; observations on the order and  
on its distribution in Terra Austr-  
alis, 36; on the division of the order,  
and on the species found in the
- vicinity of the Congo, 130-2; pro-  
portions of the order and of its  
principal divisions in various coun-  
tries, 130—1; new genera of, found  
in the vicinity of the Congo, *ibid.*;  
species found in Central Africa,  
295
- Ryania referred to Passifloreæ, 121;  
its affinity to *Smeathmannia*, 387  
*note*
- Sabine, Captain Edward, plants col-  
lected by him in Melville Island,  
185, 227
- Safu of the banks of the Congo, a  
valuable fruit of the order Amyr-  
ideæ, 160
- Salisburia, analogy of male and female  
organs in, 460
- Salix oleifolia, monstrosities in, illus-  
trating the origin of ovula, 563
- Salt, Henry, new and rare plants col-  
lected by, in Abyssinia, 91; rela-  
tion of plants collected by him to  
the vegetation of the west coast of  
Africa, 162
- Samolus Valerandi, perhaps the most  
widely diffused of Phaenogamous  
plants, 297; geographical distribu-  
tion of the genus, *ibid.*
- Santidaceæ, observations on the order  
and on its distribution in Terra  
Australis, 42; its affinity to Olaci-  
næ, 137
- Sapindaceæ, observations on the order  
and on the species found in the  
vicinity of the Congo, 107
- Sapoteæ, only one species in the col-  
lection from Central Africa, 295;  
the woody shell of the nuts really  
formed of the testa, 296
- Sapria, a genus of Rafflesiaceæ, 423;  
its characters, 426
- Sargassum baceiferum, regarded by  
Meyen as specifically identical with  
*Sargassum natans*, or *vulgare*, 550
- Sargassum natans found fixed by a  
discoid base, or root, 550
- Saururus, explanation of the structure  
of its seeds, 452
- Savignya, on the structure and cha-  
racters of the genus, and its affinities  
in the order Crucifere, 262, 265
- Schleiden, M., his theory of impreg-  
nation, 574; his observation of the
