An Editor Wanted We have been Without a popur. in our town a year or more ; Though we've had of orinters plen And of editors a score. Good at writing, good to plan ; But they all, without exception, Failed in-pleasing every man ! For this mighty sin we ! shipped', them Now, we're sending forth a call For an editor to join us Who will write to please us all; Others need not ask for favor. For of such we've bad our fill We will heed no applications Save from those who fil the bill.

He was by no means the wors'-But we did'nt seem to like him. Simply 'cause ne was the first For, you know it in the custom. Just to sacrifice a few ; So we placed our heels upon him, Ere we knew what he could do. Nort there came a gifted fellow, With a prepossessang way, Who, but for a fatal blunder, Would have doubtless won the day Blank, a crafty village merchant,

Bought a " puff" to gain a " lift," Twas offensive-other merchants Sent the editor a-arift. To a man in Balumore, Whom we knew to be a writer Fell of cunning, full of lore; They solicited, be yielded, Came delighted, young and old : But he got in debt and toddled, Leaving us " the bag to hold." Then a host of others followed, Lived a while, and passed a way:

Leaving this, our thriving village, Minus of a press to-day; Hence we send this little notice Knowing that some fellow can Make a fortune here among us, Just by-PLEASING EVERY MAN.

A New Comet.

Within the past few evenings an object of unusual interest has made its appearance in the northern portion of the heavens, and has been noted with interest by several of our citizens. It is the second comet of 1862, discovered first by Prof. Tuttle of the 1862, discovered first by Prof. Tuttle of the Cambridge (U. S.,) observatory on the night of the 18th of July last but now first apparent to the naked eye. Its distance from the polar star is about eight degrees, being on a line with the two "pointers" of the polar star is about eight degrees, being on a line with the two pointers" of the polar star is about eight degrees, being on a line with the two pointers" of the polar star is about eight degrees, being on a line with the two pointers" of the polar star is about eight degrees, being on a line with the two pointers" of the polar star is about eight degrees, being on a line with the two principal stars in the body of the Little Bear. In brilliancy it resembles a star of the third magnitude; but when examined closely has a hasy appearance; while the tail may be with difficulty perceived streaming nearly in the direction of the pole. As the comet is now approaching the earth and sun with great appidity, both the nucleus and tail will probably soon become not only visible but quite brilliant objects. During the past week it has moved four degrees in the direction of polar star, attaining the greatest proxii: ity on Friday. When first discovered its mo on appeared to be very slow, but this was owning, doubtless, to its great distance iron the earth, 135,000,000 miles. It the resembled a nebular body. Subsequent inverted the carry, and malignatify that how was approaching the earth, 135,000,000 miles. It the resembled a nebular body. Subsequent inverted the sunders of the carry and under the sunders of Advanced Life; "but he says alog." It is seen as if the earnest desire for life diminished in almost the same proportion as its willed, within the wall sopose of the diminished in almost the same proportion as its will be a say alog." It is seen as if the earnest desire for life diminished in almost the same proportion as its will be passed to the proportion as its will be presented the proportion and the proportion of the collection of the collection of the collec Cambridge (U. S.) observatory on the night of the 18th of July last but now first apparent to the naked eye. Its distance from the polar star is about eight degrees, being vestigations showed that it was approaching our globe at the rate of two and a half millions daily. The embryo of a tail was first discovered on the 31st ult. About the 26th instant the comet is expected to attain its greatest brilliancy. Up to that date at least it will shine through the whole night. We received yesterday a number of letters from different parts of the country, addressed by parties who had "seen the comet." and greatest brilliancy. Up to that date at least

Marauding Cattle.

a skillful jumper in a single season. The first requisite for such training is short fed, resulting from overstocking. The second is low fences; and the third, tempting crops of corn beyond these low fences. In the spring grass is usually good, and corn and other crops are small and uninviting; but during some midsummer periods, when and place it upon an inch rule. If you can pasture is dried up ,the process often begins.

Count from 30 to 33 of fold in the space of an inch, it equals in quality the finest wool or blown from the fence; the quiet and or derly animals stretch their heads over to reach a morsel of the tall grass; They throw down accidentally two or three more rails, and finally leap over. The owner drives them out as soon as they have learned the difference between delicious food on the control of the common of the one side and short commons on the other this test every farmer has in his possession a and puts up a rail. They have already' knowledge which will enable him to form a learned to leap a little, and the next day they improve and go a rail higher. Another rail is added, and the process is repeated which experienced wool-growers, do not until they become quite expert.

It is now a very busy season, but the farmer should not neglect his fences; if rails are thrown down, replace them before cattle find it out; keep fences high at all times; and if the animals should actually break rank as wool but as hair, on account of the hardness and straightness of the fibre.

A MASCULINE GODIVA IN CHICAGO.—
On Saturday evening last several young men of Chicago were bathing in Lake Michithrough, add rails enough to make the bar- gan when some horses came down to drink. rier entirely impregnable at once.

The elements are known, and the caculations would come out like those of an eclipse. Not so with Gibraltar. It cannot be taken. The resources of mighty empires have been wasted on that solid rampart of limestone. The cannon balls showered upon it would The cannot halls showered upon it would make another mountain. In the great siege everything was in favor of the besiegers; England was far away, her arms were engaged in every quarter of the globe, the Franco-Spanish natives masters of the Straits, the Princes of Morocco, for a time unfriendly to the English and two mighty armies led by able engineers, supplied with lavish means, stood ready for absault. Yet in four long years, during which this memorable siege lasted, they never made it. Reguis Professors of Modern History may talk of a regenerated Spain and of our ability in presence of a regenerated Spain to keep our prize; but were Spain wenty times as strong as when she returned from Teutan, the could not disturb the Rock. Elliot beat the French and Spanish feets and armies with ninety guus. What our present force of England and her rank among the arise to church; every blow struck against a plastor falls upon his people.

A Rightmous Decision.—For once, the church; every blow struck against a plastor falls upon his people.

A Rightmous Decision.—For once the church; every blow struck against a plastor fall upon his people.

A Rightmous Decision.—For once the church, with Sir William Tellows, with Sir William Tellows, with Sir William Tellows, with Sir William Tellows, with Sir William Tellows with ninety guus. What our present force of artillery on the Rock may be is not stated. Many of our batteries are masked; of some the guns are being exchanged for pieces of larger calibre and longer range; the exact the guns are being exchanged for pieces of larger calibre and longer range; the exact truth is only known to the offic als of the artillery service. Captain Sayer thinks we have 700 guns in position. We believe he underates our strength. About a ye r ago there were 1,090 guns mounted. Some changes may have been made in consequence of the arrival of Armstrong guns, but the number of cruss fit for service may of San Carlos and burn the Chevalier saying-D'Arcon's floating batteries had a range of lay safely in the bay, and passed safely round Europa point beyond reach of his shot. No fleet could live in the bay now.

tory. During the past century, however, one government after another has made concessions in their favour, and under this milder treatment they have rapidly increased in numbers and in influence. Even Russia different parts of the country, addressed by parties who had "seen the comet," and desired to apprise us of the fact.—

In Germany they are very numerous, the chief magistrate of Hamburg is a Jew. Polard is their stronghold; within its former limits 1,000,000 of them may be counted. Nearly half a million are in Morocco: 20. 000 in Constantinople; 70,000 in Italy; 40,000 in England. The whole number on Cattle may be educated into almost any-thing. A quiet cow may be converted into 6,000,000 to 12,000,001,; the probable number is 8,000,000. Of course ro pretensions to accuracy can be made in such a

An Interesting Chapter Read to a Congregation.

It was the practice of an eccentric Irish divine to read a chapter before the sermon, and, to the am zemen' of his auditory, he requested them to read with him one day, "for their edification," the first twenty seven verses of the tenth chapter of Nehemiah. He might as well have asked them to read twenty seven pages of a Sanserit lexicon. But the doctor went on with the chapter, The young men mounted several of them

He might as well have asked them to read twenty seven pages of a Sanserit lexicon. But the doctor went on with the chapter, and, as he enunciated, in his own monthy sources way, one attained in his own monthy sources way, one attained word after another, "Meremonth Magplash Meshazabeel—Hashahab," every eve was strained to the pupit; hardly a soul for sheer wonderment, venturing to draw his breath. At the end of the last verse the reader put on ope of his grainnest look, "You will have got as much good," he exclaimed, "my attentive hearers, from this chapter, as ye seem to have got from any chapter I ever read to you, and ye will carry home as much of it, and e will carry a much of it in your daily practice.

A VALUABLE Discovery - Professor J.B. SMITH'S FALLS THRESHING MACHINES MANUFACTURED BY Frost & Wood, Smith's Falls, C.W.

THESE Celebrated Machines, to which the attention of the Agricultural public is called, have during the past sasons given the most entire satisfaction. Their superiority wherever they have been introduced and brought into competition with other Machines have been universally acknowledged by all who have used them, both for Durability, ease of Draft, and the thorough and effective manner of their operation.

Our SEPARATOR (capacity, four to ten horse power) for the coming season will be superior in every respect to any ever before made, as our aim is to excel every manufactory in the Province, in producing first class work. In their construction none but the very best materials are used—frames well put together—cylinders run in copper boxes, which is a great improvement,—bubbet metal in boxes where necessary, and everything is gct up in the very best manner and with the latest improvements.

The DOUBLE PINION HORSE POWER, by which we drive the Separator and which we have much improved, is celebrated for great simplicity, ease of draft or effective power, costs less to keep in repair, and is very strong and durable.

Parties who intend getting Machines for the coming season, are respectfully invited to examine ours before purchasing elsewhere, as we are satisfied that they are the best and most reliable in the Provinces.

We continue to keep always on hand:—WOOD & IRON BEAM PLOWS. CULTIVATORS. DOG POWERS

STUMPING MACHINES, STRAW CUTTERS,

FROST & WOOD.

COOLERS. CROSS CUT SAWING MACHINES for cutting logs for firewood, shingles, stave &c., &c. Also—COOKING, BOX, and PARLOR STOVES, &c., &c., &c. We make to order on short notice SHINGLE MACHINES, CIRCULAR SAWING MACHINES, (capable of sawing 8 to 10,000 feet of lumber per day,) GRIST AND SAW-MILL CASTINGS, and all kinds of JOB WORK. Particular attention paid to the repairing of old Threshing Machines
