weeks previously. They stated positively that there had been no rash and no vomiting, but a sore throat lasting for two or three days. There was no sign of desquamation, but a pronounced cervical adenitis, the glands on one side being as large as a hen's egg, and the child was very anemic-looking, but no physician had seen her. Should I have ordered the house and the child's person and clothing to be disinfected? Should I have placarded the house till this was done?

Answer.—If searlet fever in neighborhood, this was probably a case of it. Best to have had house and child disinfected. No need

to placard after six weeks.

10. Visited a house in which I found a young lady who had been sick three weeks previously. Had had slight rash, sore throat and vomiting. Slight desquamation on face, especially forehead at roots of hair. I placarded house, but allowed girl's father to continue gathering cream upon the mother agreeing to keep girl isolated. Should I have done so? No physician had been called.

Answer.—This is a case of scarlet fever. Should have stopped

the father collecting cream. See Regulation 4.

11. Have heard that these people are going out in spite of quarantine, but no complaint has been sent in, and they live ten miles from here. Should I go and investigate?

Answer.—If the M. O. H. has quarantined, he should be satisfied

that his orders are carried out.

12. Does certificate have to be signed before the M. O. H. can collect his expenses from the municipality?

Answer.—The Member's Ticket will be sufficient voucher. If any difficulty, write the Chief Officer of Health.

13. We are supplied with a very inefficient sanitary inspector, who will not follow instructions nor try to make himself efficient. The City Council have been notified of the condition and asked to supply a competent inspector, which so far they have failed to do. What do you advise the local Board of Health to do to remedy the condition?

Answer.—The Local Board of Health may employ and pay any sanitary inspector they wish. Payment may be made under authority of Section 22 of the Public Health Act.

14. Description of suitable box for manure at stables, as to size, etc.

Answer.—Size about 4 feet by 4 feet, with screen top. As flies require 14 days in which to breed and grow to full size, there will be no necessity for screening if manure is removed and spread on fields once a week.
