

"Grain is in the Bin—Not in the Straw Pile"

THAT'S what C. D. Huntley, of Bremner, Alta., says of the work done by his Sawyer-Massey No. 1 Grain Separator. And that's what every owner of a Sawyer-Massey Grain Separator gets.

But 100% separation isn't the only good thing owners say about Sawyer-Massey Grain Separators. "Not an hour's time lost in twenty days of continuous operation; no repairs," writes C. C. Meir, of Irvine, Alta. "Simple and easy to operate," says Wm. Mason, of Sheho, Sask. And W. Hall, Queenstown, Alta., writes: "Handles flax best of any machine I ever saw."

All these are actual statements—real experiences of owners. They tell you that Sawyer-Massey Grain Separators are strong, durable, efficient—of maximum capacity for their size—simple and easy to operate. No matter what condition the grain is in, the Separator can be adjusted easily, quickly, to secure complete separation. In every way, it's the suitable Separator for the individual farmer.

The No. 1 and No. 2 Sawyer-Massey Threshers differ only in capacity. The No. 1 has more than 31 square feet of separating surface in the straw deck—the No. 2 more than 38 square feet.

Before you buy your grain separator, safeguard your investment by reading the Sawyer-Massey Bulletin No. 326, sent on request. It explains the construction that insures 100% efficiency. Bulletins describing our "Great West" Separator and Combination Separator are also available.

SAWYER-MASSEY COMPANY LIMITED

Head Office and Factory: HAMILTON, ONTARIO
