## LOBO FARMERS HAVE FINISHED SEEDING

Not as Much Corn as Usual Will Be Sown.

Iderton, May 12.—The Lobo farmers have nearly all finished seeding and are now busy at the corn and root ground. Some fields are so beaten down with the heavy rains that much work is required to get the land in shape for planting owing to the high cost of labor and other expenses. Some farmers will not plant any corn for silo filling this year, but will depend on the oat crop and hay or millet for feeding. The drop in cattle prices also has an influence, many feeling that they cannot make any profit on winter feeding.

The demand for pasture has been keen, and good prices are being paid for pasturing cattle by the month or season. The shipping cattle are nearly all turned out to pasture now and the grass is good for the season. One car of fat heifers and cows were shipped from Iderton on Saturday by F. Palsiev, and the U. F. O. intend to load regularly as the cattle get fit all season. A large amount of wire fencing is being done on the farms this spring, and wire and posts are some lower in price than last season.

The Lobo schools are making big preparations for the annual picnic on June 8, and the teachers are busy training the pupils marching and counter-marching on the school grounds during play hours. It is expected that the competition in all the sports will be keener than ever this year as good prizes are being offered by the committee. Some new features for entertainment are being prepared by the committee, and the sports promise a full program.

Two buggies came into violent collision on the Coldstream road, and as a consequence Howard Hamble suffered severe injuries, having his collarbone broken and cuts about the head. He is still laid up. His buggy also was wrecked. The other buggy, driven by Elmer Weir, escaped with minor damage, as did also the occupants. The accident happened at an intersection

where two roads crossed. The night being dark, neither driver saw the other.

**CAYUGA WOMAN IS PAINFULLY BURNED**  
Cayuga, May 13.—Mrs. Middleton met with a painful accident when the gas from her cooking range exploded in her face, burning her severely. It was late Monday with the family, for the same afternoon the front door of the store banged with the wind, smashing the plate glass to atoms.

Mrs. E. S. Martin has received word that her son, Stratford Martin, has been moved from his position of manager of the Yonge street branch of the

## Personal Health Service

(By WILLIAM BRADY, M.D., Noted Physician and Author.)

## Fruit Acids and the Teeth.

Certain kinds of fruit, such as apples, oranges, grapes, peaches, plums, grapefruit and cherries, contain acids of the organic group (not mineral acids). When eaten such fruits do not increase or produce acidity of any of the body fluids, but the blood. On the contrary, the acid fruits increase alkalinity or decrease acidity of the body fluids and are commonly prescribed for this purpose by physicians who have actual physiological knowledge. For example, lemon juice or lemonade or grapefruit invariably increases the alkalinity of the blood and decreases the acidity of the urine.

Sometimes the teeth are put on edge by these acid fruits. Is that injurious to the teeth? Is it wise to take an acid fruit as the final part of a meal, leaving the fruit acid in the mouth to act upon the teeth? Yes, it is wise. The acid reaction persists but a few moments in any case, for it is soon neutralized by the alkaline saliva poured out under the stimulus of the acid fruit. But for the few moments of mild acidity good work is being done by the fruit acid. It aids in the removal of sticky particles of food from the surfaces of the teeth and from the spaces between the teeth, where food particles are likely to remain and undergo fermentation and other bacterial changes which lead to decay or caries-cavity.

The lunch which a school child carries to school or obtains at the school lunch room should always include an orange, an apple, or some similar tart fruit as dessert. In place of the cookies, jam or sweets so often used. I venture to add the suggestion that the fruit be added, not substituted for these latter items so dear to the heart and so essential to the health and growth of the school child. But the point is that the acid fruit should top off the school lunch for the benefit of the child's teeth. And in my judgment it is an excellent point-in fact, I think the apple or the orange or the pear or the peach or the apricot or the prune or plum a much better tooth-cleansing agent than any tooth-brush and dentifrice would be.

## Vital Statistics.

Including Friend W. and myself, the present population of our apartment is conservatively estimated at 3,000,002. We discovered this after retiring the first night. We quoted the undesirable tenant clause of the rent laws threatened various harsh measures and actually tried some of them all to no effect, our tenants steadfastly refusing to vacate. F. Wife is on the verge of a nervous breakdown, and I've lost some weight about the thing myself. D. W. T.

Ans.—Why not pay your pro-rata share of the rent and bid the landlord to collect the balance from the other occupants of the apartments? The best way to eradicate bedbugs is by fumigation, with hydrocyanic gas. If a professional fumigator can be employed to do the work, but that is too poisonous for any but a professional to use. Formaldehyde or sulphur fumigation will serve. When fumigation is impossible, every crack and crevice about the bedstead, the room and closets should be squirted full of a strong insecticide solution, such as one-to-twenty carbolic and one-to-five-hundred corrosive sublimate—poison which should not be kept in the house.
