

name "Denver Mud" as to be calculated to be mistaken therefor, or from violating the rights of the complainant hereinbefore set forth, in any manner whatsoever.

And it is further ordered, adjudged and decreed that the defendant deliver up any and all labels, advertisements or circulars and any and all cans or packages of the defendant's preparation having labels or wrappers with the said words "Denver Mud" printed upon them, as aforesaid, to be destroyed, and that a writ of injunction issue in accordance with this decree and it is further ordered, adjudged and decreed that the complainant recover from the defendant the profits made by the said defendant from the sale of the plastic dressing mentioned in the complaint under the name of "Denver Mud" and that the complainant recover from the defendant its damages to be assessed as the court may direct and that the defendant pay the complainant the costs of this suit to be taxed.

Dated this 3rd day of February, A.D. 1910.

JOHN C. POLLOCK, Judge.

Dr. L. L. Gray, of St. John, Mo., reporting the outlines of a case of enuresis-nocturna, treated with sanmetto, says the case was that of a maid thirteen years of age, who had suffered with enuresis from infancy. She was old enough to realize her condition, and keenly felt its effects. She acted as though she thought everyone she met knew her troubles, and consequently she was shy, unsociable, ashamed to be seen in company. Strangers would ask if she was entirely sane.

He gave her a bottle of sanmetto, told her mother to give her all assurance that it would cure her, if properly taken. He says a second four-ounce prescription verified the truth of his statement. It did cure her, and she became a perfectly formed young lady, intelligent and sociable, the downcast countenance gone and life again worth living.

Disease Carriers.

Dr. Haywood has observed that flies were numerous about spittoons used by pulmonary tuberculosists. He fed some flies on sputum, and found that they died in two days. The "specks" or feces of these flies were rubbed up with sterile water and injected into guinea pigs, and the pigs developed genuine cases of consumption. The activity of the fly as a carrier of consumption is here clearly shown.—*Ex.*
