

program in this country. Yet there is no definition in the trade agreement of a subsidy, because the Government did not include one.

I would ask the Government, and particularly the Minister for International Trade (Mr. Crosbie), to press as hard as he possibly can for the abolition of this countervail against Sydney Steel Corporation, because under the global provisions of the Canada-U.S. trade agreement it should not be there anyway. And if not, then a corporation like Sysco that has taken advantage of Canadian programs, abided by Canadian laws, will be punished retroactively by the laws of the United States.

### SPORTS

#### MEN'S WORLD FIGURE SKATING CHAMPIONSHIP WON BY KURT BROWNING OF CAROLINE, ALTA.

**Mr. Doug Fee (Red Deer):** Mr. Speaker, I rise today to salute a young man from my riding who, last month, brought great honour to himself and to his entire country when he won the World's Figure Skating Championship in Paris, France.

Mr. Kurt Browning, from Caroline, Alberta, captured the title in stunning fashion after he landed one of his patented quadruple jumps. Through Kurt's hard work, courage and perseverance, he has earned the right to be called the best in the world at what he does.

Mr. Speaker, there is seldom unanimity in this House, but I am confident that all Members will join me today in offering our sincerest congratulations to a fine young Canadian and men's World Figure Skating Champion, Mr. Kurt Browning.

### SCIENCE AND TECHNOLOGY

#### SUDBURY NEUTRINO OBSERVATORY PROJECT

**Mrs. Diane Marleau (Sudbury):** I rise today on behalf of my constituents and on behalf of all Canadians to inform this House of a very important scientific project, the Sudbury Neutrino Observatory.

This project affords Canada a unique opportunity to establish a major underground science laboratory of the highest international stature and to perform a truly fundamental experiment of world class.

A neutrino is a particle given off by the sun, and by studying its properties in a unique location deep within

Creighton Mine, scientists will have a more complete understanding of the universe.

We are deeply concerned about delays in a funding decision. There are great economic as well as scientific benefits to be gained by this laboratory.

Substantial financial contributions are expected from outside Canada and further delays could jeopardize this support. I ask that a definite commitment be made now, by the federal Government.

### TRIBUTE TO MEMORY OF MARCEL LORTIE

**Mr Charles DeBlois (Montmorency—Orléans):** Mr. Speaker, some time ago, the people of the riding of Montmorency—Orléans and Beauport in particular learned of the passing of Dr Marcel Lortie, a forest engineer who, through his research on tree pathology and the protection of forests, has become a renowned defender of the environment.

In recognition of his remarkable scientific accomplishments and his relentless involvement in the life of his community, notably in the field of education, Dr Lortie was awarded several awards during his brilliant career, in particular the service medal of the Order of Canada last October.

It is my hope that in the not too distant future the government will sponsor an environmental project bearing the name of Marcel Lortie. For my part, I have the honour to inform the House that I have asked the Commission de toponymie du Quebec to add the name of the deceased to its roster, thus ensuring that the great Canadian that was Marcel Lortie will soon be remembered by a place or a building named after him.

### ABORIGINAL PEOPLES

#### INNU PROTEST AGAINST MILITARY LOW-LEVEL FLIGHTS

**Mr. Ray Funk (Prince Albert—Churchill River):** Today in a courtroom in Northwest River, Labrador, or Nitassinan, 38 people stand charged for desperately trying to draw attention to the fact that military aircraft come screaming over the treetops of their homeland, destroying their livelihood, and threatening the health of their children.
