#### FOR THE CHRONICLE.

*Mr. Director.—As many Farmers doubt that the Mowing Machines now in use perform work equal to the Certificates published of their capability.—I deem it a duty in common justice to the manufacturer, as well as to the interest, so far as I have tested the working of Nuttall's improved Mowing Machine, this season, to state that my expectations have been more than realized, and do not hesitate to say that they are great labour-saving machines. They cut heavy or light grass much closer and more evenly than a scythe ; and unless in very stony or low ground, indeed, if a farmer be afraid to try them upon any ordinary meadow where a scythe can at all be used, he is astonishing to find how these machines will dip into the hollows, and shave the margin of a rough meadow. Small stones will not impede its progress, nor are they likely to get out of order if the instructions that accompany them be followed.—The first cost is only £25, and one machine will answer three or four neighbouring Farmers, and may last for twenty years.*

*Your obedient servant,*

ALEXANDER C. EVANSON.

Sussex Vale, 26th July, 1854.

*Mr. Director.—As many Farmers doubt that the*
