

W Y E T H ' S DIALYZED IRON.

(FERRUM DIALYSATUM)

A Pure Neutral Solution of Iron in the Colloid Form. The Result of Endosmosis and Diffusion with Distilled Water.

PREPARED SOLELY BY

JOHN WYETH & BRO.,
PHILADELPHIA.

This article possesses great advantages over every other ferruginous preparation heretofore introduced, as it is a solution of Iron in as nearly as possible the form in which it exists in the blood. It is a preparation of invariable strength and purity, obtained by a process of dialyzation, the Iron being separated from its acid combinations by endosmosis, according to the law of diffusion of liquids. It has no styptic taste, does not blacken the teeth, disturb the stomach, or constipate the bowels. It affords, therefore, the *very best* mode of administering

IRON

In cases where the use of this remedy is indicated.

The advantages claimed for this form of Iron are due to the absence of free acid, which is dependent upon the perfect dialyzation of the solution. The samples of German and French Liquor Ferri Oxidi Dialys. which we have examined, give acid reaction to test paper. If the dialyzation is continued sufficiently long it should be tasteless and neutral.

The appliances we have perfected enable us to prepare this solution on a large scale and in the most efficient state.

Full directions accompany each bottle.

In addition to the Solution we prepare a Syrup which is pleasantly flavoured, but as the Solution is tasteless, we recommend it in preference. Physicians will find our DIALYZED IRON in all the leading drug stores in the United States and Canada.

It is put up in bottles retailing for 75 cents, containing sufficient for two months' treatment. Large size is intended for Hospitals and dispensing; retail at \$1.50. Price List, &c., &c., sent on application.

A Sample Bottle will be sent free of charge to any practising Physician who will address the Agents.
