

sions. They both gave it a favorable recommendation to the Minister. It was then submitted to and approved by the Small Arms Committee of Canada at a meeting held at Quebec, and its use by the Department of Militia was approved in writing by Major-General Hughes, Minister of Militia, Brigadier General Benson, Master General of Ordnance, General Gwatkin, Chief of General Staff, General Macdonald, Quarter-Master General, and Lieutenant-Colonel Helmer, Director of Musketry, and was approved by the war purchasing commission of Canada, and an initial order for the purchase of same passed, and they are now being manufactured by THE NORTHERN ELECTRIC COMPANY, LIMITED, of Montreal, for THE CANADIAN GOVERNMENT. It is believed it will be generally adopted by the Allies in the present war.

DESCRIPTION

It is $11\frac{1}{4}$ inches long, $1\frac{3}{8}$ inches square. weight 6 ounces, made of Pressed Aluminum, which gives it the strength necessary for any kind of use. When detached, there is no interference with the ordinary use of the rifle. It can be attached or detached in less than Three Seconds, and the rifle fired as rapidly with as without it. It is light and convenient to carry. It gives a clearer view of the object. All target marksmen who have used it claim that it assists the sighting alignment, and enables more accurate shooting. It is well manufactured and can be furnished in large quantities at a low price.
