

## Kellogg's Darwinism Today

By VERNON L. KELLOGG, Professor in the Leland Stanford University. 395 pp. 8vo. \$2.00, net. Postage 15 cents.

A simple and concise discussion for the educated layman of present-day scientific criticism of the Darwinian selection theories, together with concise accounts of the other more important proposed auxiliary and alternative theories of species-forming.

President David Starr Jordan in *The Dial*:—Its value cannot be over-estimated. A book the student must have at hand at all times, and it takes the place of a whole library. No other writer has attempted to gather together the scattered literature of this vast subject, and none has subjected this literature to such uniformly trenchant and uniformly kindly criticism. An investigator of the first rank, and master of a clear and forceful literary style.

*New York Sun*:—Can write in English as brightly and as clearly as the old-time Frenchmen. . . . In his text he explains the controversy so that the plain man may understand it, while in the notes he adduces the evidence that the specialist requires. . . . A brilliant book that deserves general attention.

## Locy's Biology and Its Makers

By WILLIAM A. LOCY, Professor in Northwestern University. 460 pp. 8vo. \$2.75, net. By mail, \$2.88.

An untechnical account of the rise and progress of biology; written around the lives of the great leaders, with bibliography and index. The 123 illustrations include portraits, many of them rare, of nearly all the founders of biology. The book is divided into two parts: Part I dealing with the sources of biological ideas except those of Organic Evolution, and Part II devoting itself wholly to Evolution.

*The Dial*:—It is entertainingly written, and, better than any other existing single work in any language, gives the layman a clear idea of the scope and development of the broad science of biology.

*The Nation*:—Whether the reader be layman, or a college student, or a biologist whose life work is nearing completion, this summary of achievements will be an inspiration. Introduces us in a charming way to the human side of the scientists. A well chosen reading list, an excellent index.
