## Threshing Machines

### Features Found in No Other

The popularity of Case threshing machines is best evidenced by the fact that Case sells 3 machines to 1 of any other make. When you come to learn of its many time and labor saving features you, too, will know why Case machines are so popular with farmers and threshermen. Here are a few of the many reasons why. Our catalog explains them all.

1. Frame is solidly constructed of steel channels. No danger of warping and getting out of shape.
2. The big cylinders of Case machines, with their steady motion, are thorough separators. With this feature the most unfavorable weather conditions will not stop threshing, for the big cylinder handles damp and wet grain easily.
3. The cylinder teeth are made of special steel, made to our own formula and treated in our own shops. The strength of Case cylinder teeth is a great feature and is the result of years of work in the field.
4. Our system of oiling with hard oil compression cups makes it possible to lubricate all working parts while machine is in operation.
5. The steel construction of Case machines makes them fire-proof and water-proof. With a wooden machine there is not only the constant danger of the loss of the machine, but the danger of a crippled earning power in the busy season when time is worth dollars. But with a Case you are always safe.

We are limited in space to give all the facts about Case machines. It will pay every farmer and thresherman, who is planning the purchase of a threshing machine, to send for our latest 1916 Case Machinery Catalog. It will save you real money. A postcard with your name and address brings it.

**J. I. Case Threshing Machine Co.,**

Incorporated

759 Liberty St.

Racine, Wisconsin

Canadian Branches: Winnipeg, Regina, Calgary, Toronto and Saskatoon.

#### Read this Testimonial.

Gentlemen: Collier, Kans., Feb. 26, 1916.

Having used one of your threshing outfits for the past season I want to say a word of praise for your machinery. While we had a very poor threshing season the straw being very long and tough, sticks badly grown together, your 40x22 inch separator pulled, by your 80 horse power steam engine went along and did good work even while the grain was so wet elevator men would not buy it. The CASE separators men to get the grain and clean it good even though the straw is tough. Our Farmers' Union Elevator man in Collier says, "Inlets' machine was in the best cleaned wheat that came to the elevator last season." We have heard of but one complaint in our whole season's run and that was blowing so hard no machine could do good work under such circumstances. I never treated more by any company which I appreciate very much. You will always find I am strong advocate of the CASE. I am always ready to say a good word for Case at any time I get a chance.

Yours,

#### Twenty Years a Thresherman - Case is Best Machine.

Hutchinson, Kans., Feb. 28, 1916.

Gentlemen: I have been in the threshing business for twenty years, have owned and operated several different makes and styles of threshing machines and I find the CASE as good or better for every kind of work than any I have ever run. I have a CASE 80 horse power engine, 40x22 inch separator. On account of wet weather and poor condition of my average, I am ready to say another such

#### He's Glad he had a Steel Machine.

Dear Sirs: Beathear, Mo., Sept. 14, 1915.

In July 1912 I bought one CASE 22x24 inch steel separator with wind stacker and self feeder. Have threshed wheat, oats, timothy, clover and millet and am pleased to say it handled all these crops to my entire satisfaction. It has been through one fire, it burned all the belts off and came out all ready for work again with an expense of replacing the belts. A wood machine would have been a pile of ashes. In the four season's work I have not broken out a tooth and at four different times forked out gone through the cylinder. The machine is practically as good as new. I have not bought another.

#### Not a Cent for Repairs.

Rockfield, Ky., Sept. 30, 1915.

Gentlemen:

Last summer I bought a CASE 40 horse power engine and a CASE 28x20 inch separator and I want to say for the benefit of those who want to buy a threshing machine that I started to work and I threshed 18,000 bushels of wheat and several hundred bushels of oats without one cent's cost on the part of the machine. This is something no other threshing machine can say without owning a CASE Machinery.

Here is a record I would like to mention. I moved four times and threshed 750 bushels of wheat in one day. The distance from first to last set was 3 1/2 miles. (Name on Request)

The farmers were all satisfied, and the one where we threshed five days said he had not been suited before, and asked us to come back next year.

The engine and separator are very simple and easy to operate, and we believe them to be the most economical in upkeep of any machine on the market.

Yours respectfully,

(Name on Request)
