

PAGE FENCING

THE BEST IS THE CHEAPEST

When you buy a knife for instance, you consider the quality of the steel in the blade. The biggest and heaviest knife is not necessarily the best. Now there is just as much difference in the quality and strength of steel in fence wire as there is in a knife blade or razor. We use a **high carbon steel wire** which, though it costs you but little more, is fifty per cent. (50%) stronger than wire in other fences. The lightest fence we make is as strong as the heaviest of other makes.

Notice the lock in our "EMPIRE" FENCE. You may have noticed also that others are imitating it. That is a good recommendation for it. Where we lead, others follow.

All of our wire is "COILED," not crimped. Besides the extra strength and superior workmanship we give you, we furnish PAGE FENCES dipped in a

THE LOCK IN PAGE "EMPIRE" FENCES

special white paint, which on top of the best of galvanizing, will lengthen the life of wire for years. And, also, this white coating makes wire much more sightly. Owing to the great strength and elasticity of our fencing, **one-third less posts** are required, thus reducing the cost of the fencing.

As you get in PAGE FENCES **one-half more fence strength**, greater protection against rust, better workmanship, better appearance, use less posts, can you afford to use other fences, even though you could buy them for one-half the price of ours? But, really ours costs you little if any more.

We are prepared to prove any assertion we make above. Illustrated printed matter furnished for the asking.

D. H. RUSSELL, Stouffville, Ont.

QUESTIONS AND ANSWERS. Veterinary.

HORSE IS THIN IN FLESH.

Eleven-year-old horse gets thin in the winter. I had his teeth dressed last winter, and got some powders for him this winter, but he still is thin. He eats well.

H. N. E.

Ans.—It is probable his teeth require dressing again, as most horses are the better of having theirs dressed once every year. Get this done, then take 6 ozs. each, sulphate of iron, gentian, nuxvomica, ginger and bicarbonate of soda; mix and make into 48 powders. Give him a purgative of 8 drams aloes and 2 drams ginger. Feed bran only until purgation commences. After the bowels regain their normal condition, give him a powder every night and morning. V.

BRITTLE FOOT.

Thirteen-year-old horse is lame in one fore foot. It appears to be brittle, and will not hold the nails. What can I apply to toughen the foot? K. N.

Ans.—It is very probable the weakness and brittleness of the hoof is due to disease of the coffin-joint, and if so a cure cannot be effected, but the symptoms can be improved. The best treatment that can be adopted is to give him a long rest and blister the coronet once every month. This increases the growth of healthy horn more than any other treatment. Details for blistering are frequently given in these columns. If you cannot give him rest, get an ointment, made of 1 lb. lanolin, 1 lb. vaseline, and 1 lb. oil of tar. Rub the hoof, especially towards the top, and the heels well with this every day. V.

WARTS ON CORONARY BAND.

Mare got calked above the hoof on hind foot, and a horny wart grew, and now there are about 40 of them, and they discharge a foul-smelling matter, and the leg is considerably swollen. She is a valuable mare.

A. M. B.

Ans.—This is a case that requires the personal attention of a veterinarian, as in all probability an operation will have to be performed, and the parts are very vascular, hence there is danger of excessive bleeding. If you cannot get a veterinarian to attend her, cut the warts off close to the skin with a sharp knife. If much bleeding results, sear the spot with a red-hot iron. It will be necessary to cast and secure her before operating. Dress with a five-per-cent. solution of carbolic acid until healed. As she is in foal, I would advise you to simply use the carbolic acid dressing to try to keep it healthy until after she foals, and then operate, as the operation might cause abortion.

GROWTH IN UDDER.

Cow is going dry. She is due to calve in May. One of her teats got hurt, and a movable lump the size of a man's thumb has formed in the udder. A little matter still escapes from the teat. How should I treat her to remove this lump? F. J. W.

Ans.—Continue to milk, or draw the matter from this teat as long as any forms, and it is possible the lump may disappear. Even though it remains, if matter ceases to form and the milk duct remains open, the lump will not materially interfere with her milking qualities. If you are anxious to have it removed after she goes entirely dry, you will have to get your veterinarian to dissect the growth out, but this must not be done while she is milking, but must be done in time to have the wound healed before she calves again. It is very doubtful if an operation is advisable unless the milk duct becomes closed. V.

Miscellaneous.

MEMBERSHIP IN SWINE-BREEDERS' ASSOCIATION.

As I wish to become a member of the Swine-breeders' Association, who is the proper person to communicate with? J. S. M.

Ans.—J. W. Nimmo, Department of Agriculture, Ottawa.

Feeding Condiments.

It is almost universally admitted that for winter and spring feeding, something in the nature of a condiment is required as an aid to the digestion of feed which lacks the aroma and flavor of a good pasture. Various stock foods are flashily and extensively advertised for this purpose. Many of them are altogether useless, but, even with these, the inducements offered by their promoters is so great that feeders from one end of the country to the other have tried them. Of course, a trial has proved their worthlessness, and the consequence is that many country merchants are stocked up with quantities of stock foods for which there is no sale. Advertising will sell a new article, but after that article has been tried by the public and found wanting, no amount of advertising will induce the public to buy it the second time.

With Herbageum, it is different. Herbageum is the true condiment. It has been on the market for twenty-two years, and when a feeder has once fairly tested it, he continues to use it, and always has a good word to say for it. It is the same with the merchant who handles it. He has a friendly feeling towards it. He feels safe when he recommends Herbageum to his customers, and, although he would at times like to have it in a fancy package so that he might make a window display of it, he knows that fancy packages cost money, and with Herbageum the money's worth is in the goods.

Here is a letter from a flour and feed and seed merchant, of Thorold, Ont.: "For a number of years I have been selling Herbageum, and every customer who has tried it has a good word for it. The extensive advertising of some of the stock foods has forced me to handle them, but a test of these always proves them to be far short of Herbageum in results, and customers soon return to Herbageum. I use it in my own stable, and find nothing to equal it."

(Signed) A. McClenchy.

Thorold, Ont., Feb. 20th, 1906.
