

THE THIRST AND NAUSEA OF ANÆSTHESIA

are entirely prevented, and the shock of surgical operation greatly relieved by high rectal injections of

Bovinine

It should be administered with salt solution, heated to 70°F, an hour prior to operation, during same if shock is evident, and after returning patient to bed. The quantity of the injection must be suited to the individual case, varying from 2 ounces to 6 ounces of each. The salt solution renders the absorption of the ***Bovinine*** more rapid, and the heart action is immediately improved; the sustaining effect is continuous for two to three hours. The circulation which has become non-aerated through ether administration is oxygenated by the ***Bovinine***, and rapidly restored to normal condition. Hence the absence of nausea and emesis. A postal will bring you our scientific treatise on Hæmotherapy, with reports of numerous cases.
