

are two feet long, and attached to a revolving cylinder. The length of knives and its capacity for feeding make it the fastest straw cutter ever offered to the public. We invite the attention of farmers to an examination of its merits before purchasing elsewhere.

SAWING MACHINES.

Our Sawing Machines are now so well and so favorably known throughout the country that it is almost unnecessary to present their superior merits to the public. They were awarded first prizes at the Provincial Exhibition in Hamilton, and at the Central Fair in Guelph in 1872, and in 1873 they were awarded first prizes in Guelph, London and Hamilton. They are strong, substantial and durable machines, and can saw more wood in a given time than any other machine in the market. We ask an examination of their superior merits before purchasing elsewhere. Satisfaction guaranteed.

READ THE FOLLOWING TESTIMONIALS.

The following are a few of the many unsolicited testimonials we have received from all parts of Ontario from threshers who have used our threshing machines, and from farmers who have had their threshing done by them. They require no comment from us; they speak for themselves. We have given the Post Office address of all who have kindly favored us with testimonials, in order that any person having any doubt as to their genuineness may have an opportunity of communicating with the parties themselves, and have their authenticity directly and satisfactorily established. The combination of superior merits that our threshing machines unquestionably possess warrants us in saying that they are the Standard Machines of the day, and without a rival in the Dominion. Confident of this fact, every machine sold is warranted, under proper management, to give entire satisfaction. Public opinion is an impartial judge, and upon that we rely for a continuance of the patronage extended to us for upwards of twenty-six years.

THETFORD, MICHIGAN, U. S., Sept. 20, 1872.

MESSRS. MACPHERSON, GLASGOW & Co., Fingal.

GENTLEMEN,—Our Climax Double Cylinder Threshing Machine works as well as ever. The farmers in this part of the country say that the "Climax" is the fastest thresher, the most perfect separator of the grain from the straw, and the lightest running, of any machine that ever came into the State of Michigan. We are thinking of getting another machine from you next season, as we find it impossible to do more than half the threshing that we could get with one machine. There are eleven machines in this section of the country, made by different manufacturers throughout the Union, but all have to yield to the superior merits of the "Climax." We offered to thresh against any machine built in the country for one hundred dollars a side, but could find none who was willing to take us up.

Yours respectfully,

THOMAS FLETCHER.
JOHN FLETCHER.
