

**STANZAS.**  
There are three lessons I would write  
Three words—as with a burning pen,  
In tracings of eternal light,  
Upon the hearts of men.

**Have Hope!** Though clouds environ now  
And gladness hides her face with scorn,  
Put thou the shadows from thy brow—  
No night but hath its morn.

**Have Faith!** where'er thy bark is driven—  
The calm'st desert—the tempest's mirth,  
Know this—God rules the hosts of heaven,  
The inhabitants of earth.

**Have Love!** Not live alone for one,  
But man, as man, thy brother call,  
And scatter like the circling sun,  
Thy charities on all.

Thus grave these lessons on the soul—  
"Hope, Faith and Love," and thou shalt find  
Strength, when life's surges widest roll—  
Light, when thou else wert blind.

**Electric Light.**  
The Electric Light at Hungerford Suspension Bridge is, at present, one of the novel sights of the metropolis. Two miniature suns—so far without hyperbole we may characterize the electric lamps—one in each tower—covered their intense rays on the centre of the bridge, and effectually illuminated the whole of the intervening space, feebly lit in general by about 100 gas lamps. The lights remain in continuous operation from 9 o'clock, p. m., till past midnight. It is said that the light is most economically produced, and that the electric force is applicable as a motive power, as a substitute for steam, and as a means of street, &c., illumination. The inventions of Dr. Watson, the basis of the intended operations of the Electric Power and Colour Company, have, we are told, now removed the only obstacle to the universal use of electricity, and to its immediate application to locomotion, mechanical arrangements of all kinds, navigation, chemical decomposition, and illumination. Every shilling's worth of material used in Dr. Watson's batteries returns, it is said, half-a-crown in the shape of valuable pigments (which can be sold pure and unadulterated at a lower price than the adulterated articles in the market), bleaching powder, and other commercial products readily saleable. The various other uses to which this new power can be made subservient, embrace the desulphurization of coke (of which about £600,000 worth is consumed yearly by railway companies alone), telegraphing, electrotyping, smelting, and the manufacture of steel.

**Discovery of Marble.**  
We had the pleasure, this week, of examining some specimens of Marble recently discovered in the vicinity of the Bras D'Or Lake, and brought to town by a person from Whycomoham, in the Island of Cape Breton. The specimens alluded to, which have been polished at the Shop of Messrs. Adams & Drake, in the City, present a handsome surface, and bear a favourable comparison with American Marble, and what is still more gratifying, we learn that the article may be obtained in great abundance on the Bras D'Or. We trust that this newly discovered production of the Island will prove an important and valuable article of export, as well as of home consumption, to the people of Cape Breton.—*Halfpenny Presbyterian Witness.*

**The Thriftless Farmer.**  
The thriftless farmer, then, provides no shelter for his cattle during the inclemency of winter; but permits them to stand, shivering by the side of a fence, or to lie in the snow, as best suits them.  
He throws their fodder on the ground, or in the mud, and not uniformly in the high way; by which a large portion of it, and all the manure are wasted.  
He grazes his meadows in the fall and spring, by which they are gradually exhausted and finally ruined.  
His fences are old and poor—just such as to let his neighbour's cattle break into his fields, and teach his own to be unruly.  
He neglects to keep the manure from around the silos of his barn—if he has one—by which they are prematurely rotted, and his barn destroyed.  
He tills, or skims over the surface of his land, till it is exhausted; but never thinks at the first, while to manure or clover it. For the first, he has no time; for the last, he "is not able."  
He has more stock than he has the means to keep well.  
He has a place for nothing, and nothing in its place. He, consequently, wants a hoe or rake, a hammer or an augur, but knows not where to find it. He and his whole household are in search of it, and much time is lost.  
He loiters away stormy days and evenings, when he should be repairing his utensils, or improving his mind by reading the newspapers.  
He spends much time in town, at the corners of the street, or in the "snake holes," complaining of "hard times," and goes home in the evening, "pretty well tore."  
He plants a few fruit-trees, and his cattle forthwith destroy them. He "has no luck in raising fruit."  
One-half of the little he raises is destroyed by his own, or his neighbour's cattle.  
He has no shed for his firewood—consequently, his wife is out of humour, and his meals out of season.  
His plow, drag, and other implements lie all winter in the field where last used, and, just as he is getting in a hurry, the next season, his plow breaks, because it was not housed, nor properly cared for.  
Somebody's hogs break in and destroy his garden, because he had not stopped a hole in the fence, that he had been intending to stop for a week.  
He is often in a great hurry, but will stop and talk as long as he can find any one to talk with.  
He has, of course, little money; and when he must raise some to pay his taxes, &c., he raises it at a great sacrifice, in some way or other; either by paying an enormous share, or by selling his scanty crop when prices are low.  
He is a year behind, instead of being a year ahead of his business—and always will be.

When he pays a debt, it is at the end of an execution; consequently, his credit is at a low ebb.  
He buys entirely on credit, and merchants, and all others with whom he deals, charge him twice or thrice the profit they charge prompt paymasters, and are unwilling to sell him goods at that. He has to beg and promise, and promise and beg, to get them on

any terms. The merchants dread to see his wife come into their stores, and the poor woman feels depressed and degraded.  
The snake begins to come out of his chimney late in the morning, while his cattle are suffering for their morning's feed.  
Manure lies in heaps in his stable, his horses are rough and uncurried, and his harness trod under their feet.  
His bars and gates are broken, his building unpainted, and the boards and shingles falling off—he has no time to replace them—the glass is out of the windows, and the hole stuffed with rags and old hats.  
He is a great borrower of his thrifty neighbour's implements, but never returns the borrowed article; and when it is sent for, it can't be found.  
His children are late at school—that is, if they go to school—their clothes ragged, their faces unwashed, their heads uncombed, and their books torn and dirty.  
He is, in person, a great sinner, and never attends public worship—if he does occasionally do so, he comes sneaking in when the service is half over.  
If the printer wants a quarter of beef, or a few bushels of oats, corn, or potatoes, on his bill, our farmer "has none to spare."  
Take him, all in all, he is a poor farmer, a poor husband, a poor father, a poor neighbor, a poor citizen, a poor Christian, and a poor man any way you can take him.—*Fort Wayne Times.*

**To Farmer's Boys—A Hint.**  
The writer of these remarks was once a farmer's boy, and speaks from experience when he recommends all farmers' sons to keep a daily register of every thing interesting coming under their observation, relative to their business. The time of planting or sowing crops, with the results of late or early planting; the effects of any peculiar mode of manuring; the benefit or detriment from thick or thin sowing; the kind of seed; the time or manner of harvesting; the results of draining, of deep or shallow plowing, and of numerous other matters, and especially including the cost and profits of each crop, if accurately recorded, would not fail to yield a great deal of interest as well as usefulness. The time of the appearance of birds, insects, the flowering and fruiting of trees, or anything else in relation to nature and its productions, would assist very much in the acquisition of knowledge on these subjects, and be a matter of record. I am sure it would be a delightful employment, both at the time, and by its examination afterwards.

Now, all that is necessary is to get a small blank book, with a flexible cover, which may be had for a dime at any book or stationery store—and rule each page into two columns—the first for the record of planting, sowing, and all other operations during their earlier stages; and the second column for the registry of the results, directly opposite, on the same page. By comparing these results with the operations which produced them, a great deal of valuable practical knowledge would soon be obtained.  
Another advantage might result from this practice. When any operation was deferred till too late, and loss was occasioned thereby, make a memorandum of this fact at the proper place in the second column, by the examination of which, the second year, this difficulty might be avoided. Many failures occur from a want of reasonable attention; such a journal would therefore leave an excellent memorandum book to refer to daily the second year, or any other year afterwards, to remind one of what must be done at the time.

Would not this be worth a thousand times its cost, by way of making accurate, intelligent, practical, and successful farmers, of the mind and young men in the country, besides improving their knowledge of writing?  
**Action and reaction in Farming.**  
Never keep animals on short allowance—if you starve them they will surely starve you.  
Although in draining land thoroughly, your purse may be drained, yet the full crops that follow, will soon fill it up again.  
Trying to farm without capital, is like trying to run a locomotive without fuel: Money and wood must both be consumed, if they are to move the machine of the farm or of the rail.  
Always give the soil the first meal. If this is well fed with manure, it will feed all else, plants, animals, and man.  
If you wish to give an energetic movement to all your farm machinery, and keep its hundred wheels in rotation, be sure and not to be without a good rotation of crops.  
If you allow your animals to shiver, your fortune will be shivered in consequence; that is, the farmer who gives his cattle to the winds, will find his profits also given to the winds.  
Heavy carrot crops for cattle, will soon return carots of gold.  
Did you ever hear the musical notes of a starving herd of hogs? Extinguish by food those annoying notes after day has passed.  
Learn as much as possible of the experience of the skilful; the man who depends on teaching himself, will be likely to receive very poor lessons—or, as Dr. Franklin has it, he will find "he has a fool for a master."  
Fences operate in two ways—if good, they are a defence, if poor, an offence.

**MORRISON & CO.,**  
Prince William-street,  
ARE NOW RECEIVING A PART OF THEIR  
EXTENSIVE AND VALUABLE  
STOCK OF  
"DRY GOODS,"  
CONSISTING OF
