PROGRESS OF DISCOVERY DURING THE LAST HALF CENTURY.

The progress of discovery during the last half century has been most remarkable. It has opened up new worlds to the view of man, and has revealed to him the secrets of the universe. It has shown us that we are not alone in the universe, and that we are surrounded by a vast and mysterious world.

LET US LOOK BACK TO THE BEGINNING OF THIS CENTURY.

Let us look back to the beginning of this century, and see what mighty works have been done by inventors since that time. In 1800 there was not a single steamboat in the world. In 1807 Fulton launched the Clermont, which made a passage to Albany in 32 hours. At that time the mode of travelling was by schooners and sloops, which were frequently six days on the passage.

DEKRIANA.

HISTORY OF THE SIEGE OF LONDONTERRY, AND DEFENCE OF ENKILLERY. BY THE REV. JOHN GIBSON, M. A.

From the departure of Lord Montagu, a French engineer named at Cork, and travelled with an expedition to Dublin, assuming the name of King James would be suddenly with him, and that nothing was to be feared from England for several months. All men had recollected the error of Charles II. in not coming into Ireland during the siege, and therefore on the arrival of his army the Protestants were utterly vanquished. Destructive cannon were fired, and the Protestants were driven to such an extremity, that the Protestants were driven into a state of warfare, on the principle of self-preservation. Matters of but small importance were at first transacted, but as the Protestants were driven into a state of warfare, on the principle of self-preservation. Matters of but small importance were at first transacted, but as the Protestants were driven into a state of warfare, on the principle of self-preservation.

The gates were shut up in cities and towns, and were suffered to see through them without being strictly searched for arms. The houses were examined, and plate and money seized and carried off. In the month of June the Protestants were driven into a state of warfare, on the principle of self-preservation. Matters of but small importance were at first transacted, but as the Protestants were driven into a state of warfare, on the principle of self-preservation.

The Protestants were driven into a state of warfare, on the principle of self-preservation.
