

Province of Alberta

Free Land for Settlers

Grain Growers will note that Alberta has produced crops this year that have shown not only big yields but tremendous yields, yields that find very few parallels in the history of wheat growing on the American Continent. Fifty and sixty bushels per acre are quite common, and in not a few localities seventy, and even eighty bushels per acre are vouched for. Nor are these phenomenal yields restricted to any one portion of the province, but may be found all the way from Fort Vermilion in the north to the 49th parallel of latitude. Oats and barley exceed one hundred bushels per acre, and all other cereals yield in proportion.

ALBERTA'S natural resources are tremendous in variety and scope. Lands, timber, minerals and water powers are only in the infancy of development, providing large increments in value and affording unrestricted opportunity for economical progress.

Demonstration Farms and Agricultural Education

Free Provincial Schools of Agriculture are now available for settlers. These provide special opportunities for observing the best methods of farming operations and obtaining both technical and practical agricultural information.

Railroads and Telephones

Three Transcontinental Railroads now traverse the Province of Alberta. In addition, branch lines of these are distributed in every direction throughout the settled portions, while at the present moment new lines are vigorously pressing forward into undeveloped districts, which are being rapidly opened up.

Alberta was the first Province in Canada to own and operate its own telephone system, which now serves about 28,000 subscribers.
