

IN COREAN WILDS

Roy Chapman Andrews, assistant curator of the department of mammalogy of the American Museum of Natural History, who got back recently from a ten months trip to the Orient to obtain specimens for the museum, and who while in Corea explored a region never before entered by a white man, and discovered three lakes in the north of the country, gave the following description of his expedition:

"After finishing my whaling I spent three weeks at Shimonoseki, Japan, collecting fish, and then returned to Corea and went to Seoul to interview the directors of foreign affairs, from whom I got the necessary permission to go into the interior. Then I went away up the coast by ship to Shesha.

"From there I went on a push railway you get in a car and natives push you up on hand-cars—to a military station on the Tu Men River, near Musan. The latter is a walled town 500 years old, with its original public buildings and many ancient houses. It is the last place inland ever visited by whites. The Russians went there during the war, and now there are Japanese gendarmes there, as in every place in the country.

"I spoke a little Japanese, the cook I had got at Seoul spoke English well and the interpreter I had spoke Chinese, Korean and a little English. Besides them I had in my party six Korean horsemen and a hunter.

"The southern part of Corea is absolutely bare of trees, unless you so classify firm underbrush about a foot high. My cook, who was 39 years old, had never cooked with wood in his life. The only trees you see in the southern part of the country are those that have been left about graves.

"I wanted to get into the unknown region, which was said to be wooded and full of game. The last was not true. There are leopards in tremendous numbers in many parts of the country, snow leopards, and there are tigers in many districts. The former are very shy, but they and the tigers come to the villages when the snow drives them and get children, horses and dogs.

"I have a leopard skin, which was presented to me, which is nine feet long, but I did not shoot one myself. None has ever been killed by a white man in that country.

"I spent three weeks hunting two tigers on the mountain, and then decided I could spare no more time. The country is so big that I would have had to heat over a great tract. I took a friend of mine in the south of the country two months to get two specimens. Most people believe tigers are confined to hot countries, but those of Corea go away up to the Amoor River. They live among the rocks and live mainly on deer, which are to be found in great abundance. I never went out from camp without seeing three or four.

"From Musan I travelled forty miles west before I came to the edge of the big forest and the last village, Noido, a hamlet of eight or ten houses. Then I went directly toward Paik-tu-san, the white-topped mountain, which is 8,000 feet high. I went into the snow-stopped me, which was in May. There were no trails. I had to steer by compass.

"The forest I found was mainly of virgin larch, 50 by 100 feet high, with some birch, with a very thick undergrowth. My Koreans were afraid to enter it because there were reports abroad that Chinese robbers were in it. Right near is Paik-tu-san, where the Manchus originated.

"The mountain is a single peak, but it is one of a range called the Long White Mountains. The Yalu has its source there, and it had been supposed the Tu Men also rose there, but I discovered its source was in the mountains. We had to travel along the river valley, camping and hunting on the ridges on either side.

"Of course, I went into the Big Woods primarily to collect, but the fauna was so limited it was of no use, though for a time I was running eight traps and hunting. The forest was as silent as the grave and very depressing. There were no birds, except red-headed black woodpeckers as big as pigeons, and no mammals. I had not heard the luxuriant vegetation I had not been in the country long before I heard talk that three big rivers were on the mountains, the descriptions of which convinced me they were lakes. Corea was supposed to be lakeless.

"I took an immense amount of persuasion upon the part of the Japanese gendarmes to get my horsemen to go into the forest with me, and after we got there they were forever wanting to leave me. Finally I had to threaten to shoot anybody that tried to steal a horse. The ground was full of stones, and the horses were frequently mired. One day in ten or twelve hours' work we made only five miles.

"We came out of the forest upon one of the lakes suddenly. They are upon the summit of a mountain about 4,000 feet high. I found that the lakes were known by reports to the Koreans as Sam (the Three Bodies of Water), and I did not attempt to restrain them. The largest is about three miles in circumference, the next is about a mile around, and the third about two miles. The shores are entirely of volcanic ash. There is no outlet or inlet.

"I camped three or four days there, built a raft and made soundings. The water in the lakes ranges from 6 to 18 feet in depth, and as near as I could figure on the bottoms are of volcanic the top of the mountain, and I figure out that the water in the lakes comes from melting snow, rains and perhaps some springs on the bottoms. There seems a probability that the volcanic ash came from Paik-to-san, though the latter is six-tive miles distant. The ash along the shores of the lakes is loose and you sink into it up to your shoe tops. The trees thereabouts are only about thirty feet tall.

"Even when we left the lakes my Koreans were still in fear of the robbers, but we got out into the Yalu country after an uneventful trip. We soon came to where the Japanese had been cutting lumber, and then I got a raft and a small boat for myself, and went down the river 375 miles to Antung, near which the battle of the Yalu was fought. There a railroad connects with Mukden. I had been in the forest six weeks.

"Most of the people in that northern country had never seen a white man. As my eyes were not brown they would not believe that I could see. In every village they would hold up things in front of me to prove my eyesight.

"In Corea house in which I stayed I was bitten by a flea of some sort and a kind of eczema developed on my face, so I covered the lower half of it with sulphur and vaseline. Two or three women asked my cook, who was a wag, if all white men had half their faces yellow, and he assured them they were lots of white men like that in Seoul. So the next morning when I emerged from my tent I found a thorough gathering to see the curiosity. So I took a dissecting knife and scraped the sulphur from my face. The bystanders were horrified, thinking I was skinning myself.

"At another village I arrived very tired late one afternoon. Toward twilight the interpreter awakened me with the intelligence that a crowd wanted the strange looking man to show himself. I was wearing a beard at the time. Most Koreans never shave. The most they can raise in the way of hirsute adornment is a few strands. When I took a pair of scissors and began to trim my beard they were shocked, and when I took out my safety razor and began to shave off a perfect good set of whiskers, they were struck dumb. They were not used to a man who is not a member of their own family. They seemed to be afraid of me in that north country. One afternoon a delegation of two women came to my tent and asked if I would not exhibit myself the next morning to all the women in the village at once.

"In one place I saw a man 11 years old and a boy of 47. You see in Corea a male is not a man until he is married. Then he can wear the national hat. The boy of 11 had a wife and wore a hat. The other, who was single, had to part his hair and wear it down his back."

How Dayton Ladies Cure Their Corn-Pinched Toes

Miss M. Lukey, of Zena avenue, Dayton, Ohio, writes: "Before using Putnam's Painless Corn Extractor, I was quite laid up with corns, and could not even stand the pressure of a loosely buttoned shoe. I applied Putnam's Extractor and in a miraculously short time I was completely cured. I take great pleasure in recommending your valuable remedy to my friends. Putnam's Corn Extractor in 25c. bottles, sold by druggists.

IN THE SOUP.

Fairly reeking of the salt sea waves, the two old mariners strolled into a cheap restaurant and ordered a dinner. They were captain and mate, ashore after a long trip.

In a few minutes the somewhat grimy waiter appeared, and with an airy flourish deposited before the seadogs two plates of some thin, anaemic-looking liquid.

"Alloy, there!" barked the skipper, as his eye fell upon the concoction. "What in the name of Neptune is this?" The waiter bowed gracefully, arranged his napkin in the proper position and replied in lofty tones:

A WINDSOR LADY'S APPEAL

To All Women: I will send free with full instructions, my home treatment which positively cures Leucorrhoea, Ectropion, Displacements, Falling of the Womb, Painful or Irregular Periods, Uterine and Ovarian Tumors or Growths, all Hot Flushes, Nervousness, Stenches, Pains in the Head, Back or Bowels, Kidney and Bladder troubles, where caused by weakness peculiar to our sex. You can continue treatment at home. A cost of only about 12 cents a week. My book, "Woman's Own Medical Adviser," sent free on request. Write to-day. Address Mrs. M. Summers, Box 11, S. Windsor, Ont.

UNEXAMPLED COURAGE.

He was the small son of a bishop, and his mother was teaching him the meaning of courage. "Supposing," she said, "there were 12 boys in one bedroom, and 11 got into bed at once, while the other knelt down to say his prayers, that boy would show true courage."

ONE CAN WRITE IN THE DARK.

A novelty is a penholder permitting one to write in the dark, since it is provided with an electric light. The tube through which the point of the pencil goes is fitted with a small accumulator and an electric lamp. The latter throws a disk of light over the point where the writing is being done. This luminous pencil has been invented for the use of doctors, reporters, detectives, etc., whose work necessitates the taking of notes in the streets and in darkness.—Harper's Weekly.

Life is a menu in which some people never get beyond the soup.

Drive Out Damp and Mold with A PERFECTION SMOKELESS OIL HEATER. YOU know how damp gets in to linen closets and storerooms. It's no trouble at all to keep them fresh and dry with a Perfection Smokeless Oil Heater. A Perfection Heater is a great comfort, too, on chilly mornings and cold evenings. It is the handiest and most reliable heater made. No soot; no smoke; no smell. Carry it where you please. All the heat you want just when and where you want it. Descriptive circular sent on request; or, better still, ask your dealer to show you a Perfection Smokeless Oil Heater. THE IMPERIAL OIL COMPANY, Limited. Hamilton Toronto Montreal St. John Halifax Winnipeg.

THE SEA COW.

Queer Animal Which is Near Extinction.

One of the largest creatures that has inhabited the waters of the gulf of Mexico and the south Atlantic coast of this country and which is almost extinct is known as the manatee. It was found in great numbers a century ago, and even a few years back this creature was quite plentiful in certain localities.

It is very gentle and easily captured in heavy nets, which are usually stretched across the mouths of rivers emptying into the south Atlantic or Gulf of Mexico. The flesh is very delicious and brings a high price, having a strong resemblance to the very first veal. The skeleton is valued at \$100, and the skin if removed properly and cared for by those who understand its properties will bring a like amount.

This creature is often from ten to twelve feet in length and weighs about 2,000 pounds. It is so gentle it will not strike the light craft that happens to be near it, and when captured it shows no resistance whatever. It is safe to say that in the next quarter of a century this creature will be extinct, unless specimens are preserved simply to prevent the complete loss of one of our most wonderful sea creatures.

It lives wholly on salt water vegetation and grows up in the mouths of the rivers emptying into the sea.—New York World.

Minard's Liniment Cures Diphtheria.

Teacher (to class in geography)—Johnny, the Tyne flows into the North Sea. That is its mouth. Now where is its source?

Johnny (after careful deliberation)—At the other end, ma'am.

NEW USE FOR OLD THINGS. Empty spoons and the flat tin disks that are frequently to be found as extra inside covers to lard pails make the finest sort of covers for small steppans if a little cleverness is used in bringing the two together. The spoon is sawed in half and is attached by a nail or a screw to the disk. The end of the nail or screw is flattened on the other side of the disk and the cover is made. Being equipped with a wooden handle it will not be too hot to remove at any time.

Minard's Liniment Cures Colds, Etc.

FURRY. Hats. Coats. Muffs. Stoles. Skirt hems. Cuffs and collars. Christmas animals. Rugs and foot muffs. Also the edge of the bedroom slipper. And the colder it grows the more we'll like furriness.

THE PERFECT STATE.

(Ottawa Free Press) Socialism must take its place among other theories of social improvement. Each of its proposals must be weighed and in so far as it seems just, beneficial and workable it will be approved by the common sense of most. The perfect state will never be won by adopting any cut and dried theory of Mr. Wells or Mr. Bernard Shaw, but by ages of strenuous effort often resulting in but slow progress. And the perfect state when we reach it may be very different from our views of it at a distance.

LESSER EVIL.

"Wealth has its penalties," said the ready-made philosopher. "Yes," replied Mr. Cumrox, "I'd rather be back at the dear old factory than learning to pronounce the names of the old masters in my picture gallery."

NOT SO HARD.

"Yes, I once travelled all over the country with a troupe of trained dogs." "Didn't you find them difficult to manage?" "I used to think they were hard to manage, but I've changed my mind since I've been managing a troupe of operatic stars."

SMARTEST OF DOLLS.

Tiny Images Made in Mexico Complete in Detail.

It is thought that the tiniest dolls are those made by Mexican Indians. They are barely three-fourths of an inch long in many cases, but are nevertheless perfect in detail.

The method of manufacture is as follows: First there is made a diminutive framework of wire. This is then wound with fine silk thread until the proper figure has been secured. The costumes are then cut according to the character of the doll and fitted to it.

With needles that can scarcely be held in the fingers, needles of which the eyes are almost invisible, various designs are embroidered on the dolls' clothes with the finest of silk threads. So cleverly do the Indians execute these designs that even through a powerful glass the details appear to be perfect, although the work is accomplished without the aid of any enlarging device.

Once properly dressed, the doll is given its hair. Even to the details of braids and ribbons this work is carried out. Then there are formed the eyes, nose, mouth, hands and feet.

In Mexico these dolls are sold for ridiculously small sums. It takes about two hours of painstaking labor these accessories are sewed to the main figure.

Some dolls are provided with tiny baskets of flowers, fancy sombreros, water jars and other paraphernalia. The baskets are made of hair by the Indians of Guanajuato. The bits of pottery are made of clay in exact imitation of the practical sizes. All these accessories are sewed to the dolls.

Miniature roses are embroidered in the costumes of the dancing girls and ornaments are arranged in their hair. The shoulders and the arms are formed in graceful and life-like attitudes of dancing. The matador is complete in every particular—his costume being gayly decorated in many colors. The hair dressed in true Spanish fashion, including the conventional queue.

Forty years in use, 20 years the standard, prescribed and recommended by physicians. For Woman's Ailments, Dr. Martel's Female Pills, at your druggist.

CANCER GERM DISCOVERED.

Dr. Gaston Odin, of Paris, France, one of the younger laboratory scientists, who studies, experiments and investigates the origin and cause of cancer, has discovered the cause of the most fatal of chronic maladies—cancer, writes Dr. L. K. Hirschberg, in "The World Magazine" for December.

Cancer is a generalized disease, which may break out in a number of places. Hence its origin must be sought in the blood. On tracing a specimen of the blood of a cancerous person under a microscope, Dr. Gaston Odin noticed that many of the red corpuscles which are the most important constituent of the vital fluid were of an unusual form, some being round, some being spindle-shaped, instead of the smooth sphere which is the normal corpuscle, but most of them floated free in the serum—the clear fluid which is the carrying medium of the red and white corpuscles. It was only after long reflection on these curiously shaped forms that the true solution flashed across the mind of the French savant; that the cancer microbe had escaped detection hitherto because it concealed itself within the red corpuscles.

THE POULTRY REVIEW

PUBLISHED MONTHLY \$1.00 PER YEAR. Brimming over with useful information for farmers and stock raisers. Makes very acceptable and instructive Christmas gift. SAMPLE COPY UPON REQUEST. HERBERT HALL, 405 Mary St., Hamilton, Ont.

HELP WANTED.

WANTED—KNITTERS FOR JENCKES' Automatic and Creelina machines. Apply Kingston Hosiery Co., Limited, Kingston, Ont.

FARMS FOR SALE.

FARM FOR SALE, 175 ACRES TOWNSHIP of Nichol, County of Wellington, known as the Crabbe farm, two miles from Fergus, brick dwelling and kitchen, bank barn. Terms, one-half cash, balance on mortgage, six per cent. Apply to Gibbons, Harper & Gibbons, London, Ontario.

FOR SALE—A CHOICE ONE HUNDRED acres; located in the heart of the County of Norfolk's great fruit belt; alone phone and mail delivery; 28 under 200 state of cultivation; balance good timber. Five acres berries and orchard; 20 acres for grain; near Delhi; seven miles from Simcoe; on main road. Good water; new brick house; other buildings and fences in good condition. Apply to C. S. Neiles, Delhi, Ont.

\$300 A YEAR WILL RENT A choice 50 acre farm in Township of North Dorchester. If rent paid promptly for term of lease, clear deed of the property will be given tenant. Apply M. J. Kent, London, Ont.

FOR SALE.

FOR SALE—TAILORING BUSINESS. Good chance for right man; not much capital required. Apply to W. Buck, New Hamburg, Ont.

AMERICAN AND ENGLISH BILLIARD tables manufactured by the Brunswick-Balke-Collender Co., of Canada, Limited; fitted with Monarch cushions; used in the best billiard rooms and clubs in Canada; bowling alleys and hotel fixtures. THE BRUNSWICK-BALKE-COLLENDER CO., OF CANADA, Limited, 47-51 Adelaide Street, West, Toronto. Please mention this paper.

RACIAL COLORING.

Dark Skin, Protects Negro From Rays of Sun.

Investigations with reference to the effects of tropical light on the white man have led to the conclusion that the pigmentation of the skin in dark race affords protection against the effects of too much sunlight, and that its absence in the light races is a bar to their survival in hot and cloudless lands.

It is pointed out that where the northern races have survived on removal to lighter countries it has been in cloudy localities, and Woodruff has based his argument for the tethal effects of a strong light on all forms of life upon such facts as that the Polar seas are rich and the tropical waters poor in plankton.

He also cites the facts that bacteria are killed by strong sunlight, and that whenever it penetrates thin-skinned plants, it retards growth or causes death.

SANOL RELIABLE CURE for Gall Stones, Kidney Trouble, Kidney and Bladder Stomach, Gravel, Lumbago, Uric Acid. Price \$1.50. Most leading druggists. THE SANOL MFG. CO., LTD. Winnipeg, Man.

SHE IS YOURS.

The Youth—Sir, I came to ask your consent to my marriage with your daughter. The Old Man—Is your income sufficient to support a wife? The Youth—It is and, in addition to that, it is sufficient to enable me to stand an occasional touch from my wife's father. The Old Man—Say no more, young man. She's yours. Bless you, my son.

Where Toronto Leads

Its Public Buildings for the Young Men, the First on the Continent.

Among the finest buildings in Toronto are those owned and occupied by the Young Men's Christian Association, which including the New Central Building, nearing completion, represents an investment of about a million and a half dollars. The buildings are located at East Toronto, Broadview avenue, near Gerrard, Central, on College, near Yonge; West End, at College Davenport, University of Toronto and Mimico Railroad Association. The memberships represent an army of about 8,000 men, about 2,000 of whom crowd the buildings every night.

These finely equipped buildings are at the disposal of all the young men who come to the city from the various centres of the Province, and a young man coming to the city for the first time way secure a position, a good boarding house and finds friends at any of the Association buildings. No charge is made for these services.

LOYD-GEORGE'S FAMILY.

David Lloyd George's relatives have played a great part in his life. It is indeed perhaps the most inspiring feature of his private life that all his family seem to have formed themselves into a league for his advancement.

His uncle was in the trust sense a second father to him. His wife has never thought anything a sacrifice which has helped to win him fame. His brother—then junior partner in the firm of Lloyd George & George—unconsciously did the work of two in the early days of the senior partner's career when his Parliamentary duties took him away from the office for a great part of the year and long before he had been able to give up his profession and devote himself wholly to politics.

Lloyd George on his side has always regarded his family at Criccieth as partners with him in an enterprise which has happened to throw him into the light of publicity while they have remained in comparative obscurity. He has never grown away from his own home.—Strand.
