TS ONE of the best preparations now before the public for the cure of those distressing complaints that have baffled the skill of phy-sicians for ages past. It is perfectly safe and reliable, being prepared from the prescription of a surgeon in the British army, who com-pounded it for the cure of those Nervous Dis-eases existing in the regiment to which he was attached, and by this Bemedy he was enabled to effect a positive cure in every case. Wherever it has been used according to directions, it has never failed to produce the most satisfactory re-sults. A. A. STERLING, Sheriff. Price 25 cents. Every bottle has the name Fellow & Co., blown on the glass. Fredericton, May 16, 1883 SEED T. B. BARKER & SONS. suits. It has but recently been introduced into this country, but during the last two years it has been used here, its cures of the above diseases have numitiered more than that effected by all other remedies compliand; it has cured cases of from one to twenty years standing, as can be vouched for by this testimony of most reliable distinguished. March 7, Champion Swede, Skirving's Swede, Laing's Swede. And life a happy dream-A dream of glances swift and coy, And tangle gold of hair, And rosy lips that shyly smile, And drive me to despair. C., May 15th, 188' GENTLEMEN—Having been a suffer for a long time from nervons prostratio and general debility, I was advised of try Hop Bitters. I have taken or bottle, and I have been rapidly gettif better ever since, and I think it th better ever since, and I think it th	everything that bears must possess both the male and the female qualifications; but perhaps it is not generally known that such is the case with eggs. I have found by experience that it is, and by the following rule: I raise as many pullets among my chekens as I wish to, while some of my neighbors complain that their chickens are nearly all roost ers, and they cannot see why there should be a difference. I will tell you here what I told them, and for the benefit of those who do not know, that the small, round eggs are female ones and the long, slender ones are males This rule holds good among all birds So if you wish to raise pullets, set the small, round eggs; if you wish to raise roosters, set the long slender ones. In this way you will be able to raise which ever sex you wish to." The American Elevator has been looking up the history of corn. I says: "The first we hear of corn is in the old traditional times from Centrs America. So in a time, calculated the be the year 960, we find a record of corn being distributed among the nations from some nations unknown But two varieties are mentioned—the yellow and the white. Columbus foun corn growing when he landed upon hi continent. All the early explore found corn growing and in cultivation and found it growing in varieties, an account of corn published in England a the stat time speaks of the red, the which to but we and the yellow, of which ti but we wan uch earlier than the rest.	peach leaves and salt water,) set if where you wish it to remain, saw off the limb with the bees on it, lay it on a board at the entrance of the hive, and in a short time the bees will be established in their new quarters. If it is not convenient to cut the limb, or other object on which they may light, take an did wool hat, secure it to a pole and hold it near the cluster shake or smoke a portion of the bees off; when they attempt to return, put the hat in the way by the side of the cluster, until quite a number bave settled upon it, after which you will have no difficulty in getting the whole swarm. When they have all settled on hat, walk gently to you hive, and deposit tham on the board as you would the limb. If they should be deposited to clog the en- trance to the hive by stopping to hun satisfaction, keep it open by gently to ushing them aside with a twig to to work at once, and build smal tits of comb by the next morning take the rare end of the hive three inches above the level of the front, to make them build strait combs. If two swarms should be out at the swith a tablecloth or sheet, to hid they will all light in the same cluster in uch, perhaps, to your dismay. If at any time during swarming, you can discover and secure the queen you have the matter in your ow hands. Cage the queen, take the bive in which you desire the bees and set it in the make of the bive	12 Every leaf has a bud at the base, and either a branch of fruit or a ten- dril opposite it 13. A tendril is an abortive fruit bunch—a bunch of fruit a productive tendril. 14. A bunch of grapes without a healthy leaf opposite is like a ship at sea without a rudder—it can't come to port. 15 Laterals are like politicians, if not checked they are the worst of thieves.— <i>The Vine Dresser</i> . <b>To Make Fine Butter</b> . <b>To Make Fine Butter</b> . The process of making butter, eage the New York <i>Times</i> , is an important one, for the best may be spoiled and poor butter may be improved in the working. When the butter is churn- ed it is taken from the churn and placed on a smooth maple, birch or or chestnut table or other butter worker or put in a boul. If the churn will admit of it, the butter may be i that way in separate waters until i runs off quite clear, and the butter is quite free from milk. This is indis pensable if the butter is expected to the rate of one ounce to the pound or butter. The butter is pressed ou with the ladle, and never to be work ed by the hands under any circum g, stances, and the salt is spread over it it is then doubled and pressed ou again and cut and gashed with the ladle, but mever rubbed or plastored stat is presty evenly mixed; it	result has been that quite a number of ewe lambs are sacrificed at the shambles, to the serious detriment of flock improvement, as will as ultimate loss to owners of country. As in a majority of instances the sires of thoso lamb are better bred animals than are the dams, their preservation would prove a long stride in the direction of flock improvement, and if the owner feels compelled to restrict the number of animals handled, a rigid culling from the older ewes and filling their places from the choicest ewe lambs, should be a policy from which no temporary demand for "lamb and spring pess" tempts him to deviate. So long as the ewe lamb is a superior bred animal to its mother (and the breeder who does not have it so has mistaken his calling,) it will prove the more profitable to retain in the flock. Not only does such retention insure the commingling of fresh and better blood, but it reduces the ex- pense and dangers of management by the omission of animals which have passed their prime and filling their places with those that in the nature of things will grow better instead o s worse, for at least several succeeding years. Those who have not carefully compared results fails to appreciate how materially the loss from "natura f causes" may be reduced b carefu to observance of the policy o. " taning —-either for increase in numbers or maintaining any desired in ber- iyoung and growing anims, am- rigidly excluding such as have pass? the meridian of life and vigorous "1 , provement. The advantage in thi trespect alone is sufficient to offset an its temporary top price for ewe lan"

PRICE 43, JUGUED or MEX, SOLLE by LITCHINGTON, WEILLA, RICCILARDOOVE CO., MILLIPHON, WEILLA, RICCILARDOOVE, COULGH BALSAM for the curte of the MILLIPHON HAS GIVEN TISE to Spatial MILLIPHONE, TO PROJECT YOURSIL FORMATION, COULGH BALSAM FOR AND CONSUMPTION HAS GIVEN TISE to Spatial MILLIPHONE, TO PROJECT YOURSIL FORMATION, COULGH BALSAM FOR AND CONSUMPTION TO AND YOURS OF THE LUNGS, ASTHER, MA, IS BORDON, EXAMINE THE DOULE AND SECTION OF THE LUNGS, ASTHER, MA, IS BORDON, EXAMINE THE DOULE AND SECTION OF THE LUNGS, AND MILLIPHONE, TO PROJECT YOURSIL FORMATION, COULGH BALSAM FOR AND CONSUMPTION ON SOURCE TO THE AND SOLUTION OF THE STATE OF TH	man when he lived in your town?" in- quired a busybody of a friend. "I should think he was," replied the gentle- man, "as many persons endeavored to prevent his leaving; and several of them, including the tailor, followed him some distance." *Women are rapidly finding places in the learned professions and the more lucrative occupations from which they were former excluded. Many are graduating in medicine. Mrs. Lydia E Pinkham, of Lynn, Mass., is a minister of health to thousands who may never touch the hem of her garment or behold the genial light of her modest counter nance. A happy family: "I suppose," said the man in the easy-chair, "that my wife and I are the most contenter couple you ever saw. We never quar rel about anything. She is always will ing to get up in the morning and built the fire, and I am always perfectly will ing to let her. One Scotchman complained to another that he had got a ringing in his head that he had got a ringing in his head the other. "No, never." "And do y ken the reason ? Because it's cracked." WASHINGTON, D. C., May 15th, 188' GENTLEMEN—Having been a suffer for a long time from nervons prostration and general debility, I was advised for bottle, and I have been rapidly gettin better ever sinco, and I think it th best medicine I ever used. I am now we able to go about and	everything that bears must possess both the male and the female qualifications; but perhaps it is not generally known that such is the case with eggs. I have found by experience that it is, and by the following rule: I raise as many pullets among my chekens as I wish to, while some of my neighbors complain that their chickens are nearly all roost ers, and they cannot see why there should be a difference. I will tell you here what I told them, and for the benefit of those who do not know, that the small, round eggs are female ones and the long, slender ones are males This rule holds good among all birds So if you wish to raise pullets, set the small, round eggs; if you wish to raise roosters, set the long slender ones. In this way you will be able to raise which ever sex you wish to." The American Elevator has been looking up the history of corn. I says: "The first we hear of corn is in the old traditional times from Centrs America. So in a time, calculated the det he year 960, we find a record of corn being distributed among the nations from some nations unknown But two varieties are mentioned—the yellow and the white. Columbus foun corn growing when he landed upon his continent. All the early explored found corn growing and in cultivation and found it growing in varieties, an the varieties differed in different local ties, some adapted to some uses betty than others. To illustrate this, a account of corn published in England at the bute, and the yellow, of which t but two base sof the red, the white the blue, and the yellow, of which t but was much earlier than the rest, variety which, if it has escaped extin it too, I have been unable to find. W khanna, probably the sweet com orior	peach leaves and salt water,) set if where you wish it to remain, saw off the limb with the bees on it, lay it on a board at the entrance of the hive, and in a short time the bees will be established in their new quarters. If it is not convenient to cut the limb, or other object on which they may light, take an did wool hat, secure it to a pole and hold it near the cluster shake or smoke a portion of the bees off; when they attempt to return, put the hat in the way by the side of the cluster, until quite a number bave settled upon it, after which you will have no difficulty in getting the whole swarm. When they have all settled on hat, walk gently to you hive, and deposit tham on the board as you would the limb. If they should be deposited to clog the en- trance to the bive by stopping to hun satisfaction, keep it open by gently to a may facilitate their march by pushing forward the rear of the com- pany in the same manner. They will go to work at once, and build smal- tists of comb by the next morning two swarms should be out at the inches above the level of the front, to make them build strait combs. If two swarms should be out at the same time, cover the first to alight with a tablecloth or sheet; to hid they will all light in the same cluster in uch, perhaps, to your dismay. If at any time during swarminy, you can discover and secure the queen you have the matter in your ow hands. Cage the queen, take the bive in which you desire the bees and set it in the place of the hive they will soon discover the absence- toe their queen and return to the o no stand, will enter tue new hive. Aft a portion of the swarm has enterer	12 Every leaf has a bud at the base, and either a branch of fruit or a ten- dril opposite it 13. A tendril is an abortive fruit bunch—a bunch of fruit a productive tendril. 14. A bunch of grapes without a healthy leaf opposite is like a ship at sea without a rudder—it can't come to port. 15 Laterals are like politicians, if not checked they are the worst of thieves.— <i>The Vine Dresser</i> . <b>To Make Fine Butter</b> . <b>To Make Fine Butter</b> , <b>Payse</b> the New York <i>Times</i> , is an important one, for the best may be spoiled and poor butter may be improved in the working. When the butter is churn- ed it is taken from the churn and placed on a smooth maple, birch or or but in a boul. If the churn will admit of it, the butter waked ir it thaw off, and clear, cold water pour ed into it, and the butter waked it is taken from milk. This is indis porsable if the butter is expected to tkeep well. It is then salted at the rate of one ounce to the pound of butter. The butter is pressed ou with the ladle, and never to be work if guite free from milk. This is indis e bonsable if the butter is pressed ou with the ladle, and never to be work if yo the hands under any circum stances, and the salt is spread over it it is then doubled and pressed ou magain and cut and gashed with the ladle, but rever rubbed or plastored but only squeezed and pressed, unt the salt is pretty evenly mixed; it the neut away in a cool place for 2 bours or less, as may be convenien if the will then appear streaked and pressed on it will then appear streaked and pressed on it problem, and is worked over in the stances, and the salt systemed of and the salt is pretty evenly mixed; it then put away in a cool place for 2 bours or less, as may be convenien if the will then appear streaked and pressed on it is worked over in the	result has been that quite a number of ewe lambs are sacrificed at the shambles, to the serious detriment of flock improvement, as will as ultimate loss to owners of country. As in a majority of instances the sires of those lamb are better bred animals than are the dams, their preservation would prove a long stride in the direction of flock improvement, and if the owner feels compelled to restrict the number of animals handled, a rigid culling from the older ewes and filling their places from the choicest ewe lambs, should be a policy from which no temporary demand for "lamb and spring peas" tempts him to deviate. So long as the ewe lamb is a superior bred animal to its mother (and the breeder who does not have it so has mistaken his calling,) it will prove the more profitable to retain in the flock. Not only does such retention insure the commingling of fresh and better blood, but it reduces the ex- pense and dangers of management by the omission of animals which have passed their prime and filling their places with those that in the nature of things will grow better instead of sworse, for at least several succeeding years. Those who have not carefully compared results fails to appreciate how materially the loss from "natura f causes" may be reduced by carefu to observance of the policy o, " taning either for increase in numbers of or maintaining any desired number- ; young and growing anim.s, and rigidly excluding such as have passo the meridian of life and vigorous " its morous of the policy o, " taning either for increase in numbers young and growing anim.s, and rigidly excluding such as have passo the meridian of life and vigorous " its and when to it is added the tide improved blood that comes on though young animals, every prudent flock manager will find warrant for steelin by his face against the most temptin
